Mr. Dennis Babson, Emergency Services Coordinator
Governor's Office of Emergency Services
Disaster Assistance Division, Hazard Mitigation Section
3650 Schriever Avenue
Mather, California 95655

Dear Mr. Babson:

The Board of Supervisors unanimously approved that Stanislaus County participates in developing a Local Hazard Mitigation Plan. The County is committed to reducing risks from natural hazards to make our communities disaster resistant. We are submitting five binders for approval. Volume One contains the County's final submission. The County is partnering with several jurisdictions whose submissions are included in Volumes Two and Three. Upon your review, we would appreciate you forwarding our final submissions to the Federal Emergency Management Agency for their review. The Board of Supervisors will formally adopt the County's Local Hazard Mitigation Plan after State and FEMA approval as recommended in your instructions.

We appreciate your help and assistance on this project. Please call me at 209-525-6532 if you have any questions.

Sincerely,

Marnie Ardis

LOCAL HAZARD MITIGATION PLAN REVIEW CROSSWALK

FEMA REGION #9

Jurisdiction: STANISLAUS COUNTY, CALIFORNIA

LOCAL MITIGATION PLAN REVIEW SUMMARY

The plan cannot be approved if the plan has not been formally adopted.

Each requirement includes separate elements. All elements of the requirement must be rated “Satisfactory” in order for the requirement to be fulfilled and receive a score of “Satisfactory.” Elements of each requirement are listed on the following pages of the Plan Review Crosswalk. A “Needs Improvement” score on elements shaded in gray (recommended but not required) will not preclude the plan from passing. Reviewer’s comments must be provided for requirements receiving a “Needs Improvement” score.

SCORING SYSTEM

Please check one of the following for each requirement.

N – Needs Improvement: The plan does not meet the minimum for the requirement.
Reviewer’s comments must be provided.

S – Satisfactory: The plan meets the minimum for the requirement. Reviewer’s comments are encouraged, but not required.

Prerequisite(s) (Check Applicable Box)

Adoption by the Local Governing Body:
§201.6(c)(5) **OR**

Multi-Jurisdictional Plan Adoption: §201.6(c)(5)
AND
Multi-Jurisdictional Planning Participation:
§201.6(a)(3)

Planning Process

Documentation of the Planning Process: §201.6(b)
and §201.6(c)(1)

Risk Assessment

Identifying Hazards: §201.6(c)(2)(i)
Profiling Hazards: §201.6(c)(2)(i)
Assessing Vulnerability: Overview: §201.6(c)(2)(ii)
Assessing Vulnerability: Identifying Structures:
§201.6(c)(2)(ii)(A)
Assessing Vulnerability: Estimating Potential
Losses: §201.6(c)(2)(ii)(B)
Assessing Vulnerability: Analyzing Development
Trends: §201.6(c)(2)(ii)(C)
Multi-Jurisdictional Risk Assessment:
§201.6(c)(2)(iii)

Mitigation Strategy

N	S

Plan Maintenance Process

Monitoring, Evaluating, and Updating the Plan:
§201.6(c)(4)(i)
Incorporation into Existing Planning Mechanisms:
§201.6(c)(4)(ii)
Continued Public Involvement: §201.6(c)(4)(iii)

Additional State Requirements*

N	S

LOCAL MITIGATION PLAN APPROVAL STATUS

PLAN NOT APPROVED	
PLAN APPROVED	

*States that have additional requirements can add them in the appropriate sections of the *Multi-Hazard Mitigation Planning Guidance* or create a new section and modify this Plan Review Crosswalk to record the score for those requirements.

See Reviewer's Comments

LOCAL HAZARD MITIGATION PLAN REVIEW CROSSWALK

FEMA REGION #9

Jurisdiction: STANISLAUS COUNTY, CALIFORNIA

PREREQUISITE(S)

Adoption by the Local Governing Body

Requirement §201.6(c)(5): *[The local hazard mitigation plan shall include] documentation that the plan has been formally adopted by the governing body of the jurisdiction requesting approval of the plan (e.g., City Council, County Commissioner, Tribal Council).*

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			NOT MET	MET
A. Has the local governing body adopted the plan?	Volume 1, Tab 3	Board authorized initial submittal of Risk Assessment		
B. Is supporting documentation, such as a resolution, included?	Volume 1, Tab 3	Letter of Intent and Board agenda item included		

SUMMARY SCORE

Multi-Jurisdictional Plan Adoption

Requirement §201.6(c)(5): *For multi-jurisdictional plans, each jurisdiction requesting approval of the plan must document that it has been formally adopted.*

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			NOT MET	MET
A. Does the plan indicate the specific jurisdictions represented in the plan?	Vol 1, Tab 4, Pg 14	Describes included and excluded jurisdictions		
B. For each jurisdiction, has the local governing body adopted the plan?	Vol 2 (Incl. In each jurisdictions' tab	Included for all partners except City of Ceres (which joined the County's LHMP process late.)		
C. Is supporting documentation, such as a resolution, included for each participating jurisdiction?	Vol 2 (Incl. In each jurisdictions' tab	Included for all partners except City of Ceres (which joined the County's LHMP process late.)		

SUMMARY SCORE

Multi-Jurisdictional Planning Participation

Requirement §201.6(a)(3): *Multi-jurisdictional plans (e.g., watershed plans) may be accepted, as appropriate, as long as each jurisdiction has participated in the process ... Statewide plans will not be accepted as multi-jurisdictional plans.*

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			NOT MET	MET
A. Does the plan describe how each jurisdiction participated in the plan's development?	Vol. 1, Tab 4, Pg 9	Complete description of the LHMP planning process		

SUMMARY SCORE

LOCAL HAZARD MITIGATION PLAN REVIEW CROSSWALK

FEMA REGION #9

Jurisdiction: STANISLAUS COUNTY, CALIFORNIA

PLANNING PROCESS: §201.6(b): An open public involvement process is essential to the development of an effective plan.

Documentation of the Planning Process

Requirement §201.6(b): In order to develop a more comprehensive approach to reducing the effects of natural disasters, the planning process shall include:

- (1) An opportunity for the public to comment on the plan during the drafting stage and prior to plan approval;
- (2) An opportunity for neighboring communities, local and regional agencies involved in hazard mitigation activities, and agencies that have the authority to regulate development, as well as businesses, academia and other private and non-profit interests to be involved in the planning process; and
- (3) Review and incorporation, if appropriate, of existing plans, studies, reports, and technical information.

Requirement §201.6(c)(1): [The plan shall document] the planning process used to develop the plan, including how it was prepared, who was involved in the process, and how the public was involved.

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			N	S
A. Does the plan provide a narrative description of the process followed to prepare the plan?	Vol. 1, Tab 4, Pg 9	Complete description of the LHMP planning process		
B. Does the plan indicate who was involved in the planning process? (For example, who led the development at the staff level and were there any external contributors such as contractors? Who participated on the plan committee, provided information, reviewed drafts, etc.?)	Vol. 1, Tab 4, Page 10	Project team is identified in Volume 1, Tab 4 ("documentation of the Planning Process"). Specific task force leaders are identified beginning on Vol. 1, Tab 4, Page 10.		
C. Does the plan indicate how the public was involved? (Was the public provided an opportunity to comment on the plan during the drafting stage and prior to the plan approval?)	Vol. 1, Tab 4, Page 10	Public meetings conducted with partner jurisdictions to coordinate inventory of risks. Mitigation plan development will include further public participation in next phase.		
D. Was there an opportunity for neighboring communities, agencies, businesses, academia, nonprofits, and other interested parties to be involved in the planning process?	Vol. 1, Tab 4, Page 10	Public meetings conducted with partner jurisdictions to coordinate inventory of risks. Mitigation plan development will include further public participation in next phase.		
E. Does the planning process describe the review and incorporation, if appropriate, of existing plans, studies, reports, and technical information?	Vol 1, Tab 4, Page 12	Describes existing resources utilized in the development of a new GIS tool to assess risks. Mitigation plan development will include reference to other existing resources in the next phase.		SUMMARY SCORE

LOCAL HAZARD MITIGATION PLAN REVIEW CROSSWALK

FEMA REGION #9

Jurisdiction: STANISLAUS COUNTY, CALIFORNIA

RISK ASSESSMENT: §201.6(c)(2): *The plan shall include a risk assessment that provides the factual basis for activities proposed in the strategy to reduce losses from identified hazards. Local risk assessments must provide sufficient information to enable the jurisdiction to identify and prioritize appropriate mitigation actions to reduce losses from identified hazards.*

Identifying Hazards

Requirement §201.6(c)(2)(i): *[The risk assessment shall include a] description of the type ... of all natural hazards that can affect the jurisdiction.*

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			N	S
A. Does the plan include a description of the types of all natural hazards that affect the jurisdiction?	If the hazard identification omits (without explanation) any hazards commonly recognized as threats to the jurisdiction, this part of the plan cannot receive a Satisfactory score. Consult with the State Hazard Mitigation Officer to identify applicable hazards that may occur in the planning area.	Vol. 1, Tab 5, Page 16	Includes description of natural hazards and the process used to identify those hazards. An assessment of risks for each hazard follows on Vol. 1, Tab 5 pages 18-62. Natural hazards include: 1) seismic; 2) dam failure/inundation; 3) flood; 4) landslide; and 5) wildfire.	

SUMMARY SCORE

Profiling Hazards

Requirement §201.6(c)(2)(ii): *[The risk assessment shall include a] description of the ... location and extent of all natural hazards that can affect the jurisdiction. The plan shall include information on previous occurrences of hazard events and on the probability of future hazard events.*

Element	Location in the Plan (section or annex and page #)	Reviewer's Comments	SCORE	
			N	S
A. Does the risk assessment identify the location (i.e., geographic area affected) of each natural hazard addressed in the plan?	Vol. 1, Tab 5, Pages 18-62	Hazard maps provided for earthquake, inundation, flood and wildfire risks. Description provided for landslide risks.		
B. Does the risk assessment identify the extent (i.e., magnitude or severity) of each hazard addressed in the plan?	Vol. 1, Tab 5, Pages 18-62	Extent or magnitude of risk is defined within each hazard map and described for landslide. Risk level is keyed to Appendices A-K, Tab 6.		
C. Does the plan provide information on previous occurrences of each hazard addressed in the plan?	Vol. 1, Tab 5, Pages 18-62	Previous occurrences described for each hazard: Earthquake (p 18), Landslide (p 29), Inundation (p 33), Flood (p 42), Wildfire (p 51).		
D. Does the plan include the probability of future events (i.e., chance of occurrence) for each hazard addressed in the plan?	Vol. 1, Tab 5, Pages 18-62	Probability of future occurrences described for each hazard: Earthquake (p 19), Landslide (p 29), Inundation (p 35), Flood (p 44), Wildfire (p 53).		

SUMMARY SCORE

LOCAL HAZARD MITIGATION PLAN REVIEW CROSSWALK

FEMA REGION #9

Jurisdiction: STANISLAUS COUNTY, CALIFORNIA

Assessing Vulnerability: Overview

Requirement §201.6(c)(2)(ii): [The risk assessment shall include a] description of the jurisdiction's vulnerability to the hazards described in paragraph (c)(2)(i) of this section. This description shall include an overall summary of each hazard and its impact on the community.

STANISLAUS COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN OVERVIEW

The Federal Emergency Management Agency (FEMA) has determined that there is a critical link between Hazard Mitigation Planning and sustainability. This means if Stanislaus County has the foresight to plan ahead to reduce the impacts of hazards, we will be better able to prevent injury, loss of life and damage to our homes, businesses, and neighborhoods. The County can use the threat of disaster as a catalyst to act and develop a plan so we can bounce back more quickly following a disaster. After November 1, 2004, all local governments in California will be required to have an approved Local Hazard Mitigation Plan in order to qualify for Federal mitigation funding. Unlike past years when a local plan was created after a disaster, this new program requires that an approved local plan be in place before a disaster strikes.

Stanislaus County has committed itself to reducing long-term risk to our citizens and damage to property from the effects of natural hazards. By planning, preparing and adopting a Multi-Jurisdictional Hazard Mitigation Plan, the County is taking a proactive approach to reduce and/or eliminate the impacts of hazards before they occur.

FEMA defines Hazard Mitigation as any sustained action taken to reduce or eliminate the long-term risk to human life and property from hazards. The County's plan will serve as a tool for learning from disasters that have already occurred, so we can deal with them better, quicker and less expensively than in the past!

Direct benefits include:

- Reduced loss of life, property, essential services, critical facilities and economic hardship;
- Reduced short-term and long-term recovery and reconstruction costs;
- Increased cooperation and communication within the community through the planning process; and
- Expedited post-disaster funding.

Indirect benefits include:

- Disaster resilience;
- Environmental quality;
- Economic vitality; and
- Improved quality of life.

The basic elements involved in our Hazard Mitigation Plan include:

Planning Process/Organize Resources—review existing plans and involve local agencies, businesses and members of the community.

Risk Assessment—identify hazards, vulnerabilities and impacts to determine and prioritize mitigation actions.

Mitigation Plan/Strategy—introduce the activities chosen to minimize the risks and losses associated with each hazard, and describe the strategy for implementation.

Monitor Progress/Plan Maintenance—describe the method and schedule for monitoring, evaluating and updating the plan.

Implement and Adopt Plan—the formal adoption of the plan by each governing body to demonstrate the commitment of the community and elected officials to the County's goal of becoming disaster-resistant.

STANISLAUS COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN REGIONAL PROFILE

DESCRIPTION

Stanislaus County is located in central California. It is bordered on the north by San Joaquin County, the east by Mariposa, Tuolumne, and Calaveras Counties, the south by Merced County, and the west by Alameda and Santa Clara Counties. The County's total area is 1,521 square miles, which accounts for 973,440 acres. The western boundary of the County is formed by the ridge of the Coast Range. The Stanislaus River forms a portion of the northern boundary with San Joaquin County.

Stanislaus County generally spans the width of the San Joaquin Valley floor nestled between the foothills of the Diablo Range to the west and the Sierra Nevada mountain foothills to the east. There are three major rivers in Stanislaus County. Two, the Stanislaus and the Tuolumne Rivers, run east to west. The third, the San Joaquin River, runs southeast to northwest. Dry Creek also runs east to west, then merges with the Tuolumne River in Modesto. There are no flow control systems on Dry Creek. Rainfall and runoff in the eastern portion of the County directly affect this creek. Modesto, Woodward and Turlock comprise the three major reservoirs in the County.

The County's geography places it at greatest risk of inundation from flood or dam failure risks; although other hazards due to seismic activity, wildfire and landslide are also possible. Much of Stanislaus County (nearly one-third of its land area) is located in the foothills west of Interstate 5 where very limited development and population exist. The County has less exposure to severe storm activity affecting California's coastal areas to the west and to the higher regions of the Sierra Nevada mountains; however, the subsequent runoff from storm activity poses a significant flood risk especially along the smaller, uncontrolled streams and rivers. Stanislaus County's land is entirely above sea level and is south of the Sacramento-San Joaquin River delta region.

The rich valley floor in Stanislaus County is a major agricultural production area. The County is also traversed by several vital north-south conduits for vehicular and rail transportation, communications, water and power.

POPULATION

Within Stanislaus County, there are nine incorporated cities: Ceres, Modesto, Patterson, Newman, Hughson, Riverbank, Oakdale, Turlock, and Waterford. The largest City in the County is Modesto with a 2003 California Department of Finance population of 203,294. However, Riverbank is the fastest growing city, with a population increase of 85.2% between 1990 and 2000. Additionally, there are 13 unincorporated communities within the County and substantial areas of State and Federally controlled lands such as parks, wildlife areas and other public lands.

Stanislaus County is a large, diverse, and rapidly developing jurisdiction. Much of the population growth over the last decade has been due to the County's location near the Bay Area, which includes San Francisco and the "Silicon Valley." The combination of the Bay Area job market, and freeway access to relatively inexpensive land for housing development in Stanislaus County, has contributed to increased development pressures in the cities within the County. Explosive residential growth has caused the County to become a bedroom community for the regional job centers of the Bay Area.

In the environment of California's rapidly urbanizing San Joaquin Valley, the entire County is a focal point of an area that many forecasters believe will be the fastest growing region in the State of California in the coming decades. Changing economic, political, and environmental factors, such as fuel prices, increasing fiscal pressures on local governments, housing prices and air and water quality will have significant effects on the future of Stanislaus County.

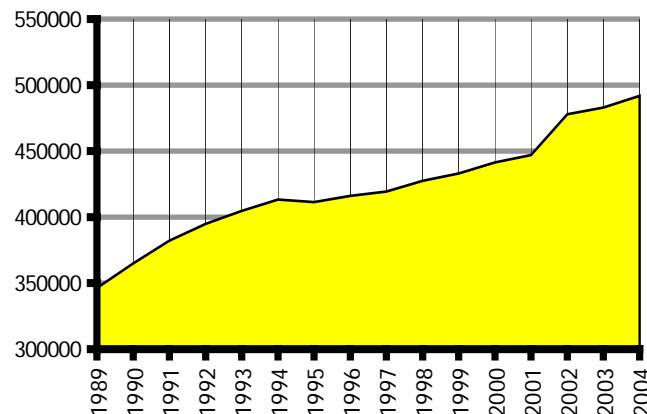

The majority of the County's population increase occurred in the nine incorporated cities rather than the unincorporated area of the County. The incorporated population increased 24% while the population of unincorporated Stanislaus County only increased 11.2%. The percentage of population living in the unincorporated areas represents 25% of the total County population.

The slower growth rate in the unincorporated area can be attributed to the County's land use policies and agreements with the cities regarding growth management within established spheres of influence. In addition, there is a greater availability of public services and amenities within the larger municipal boundaries. Overall, the economic forecast for Stanislaus County is favorable, with growth occurring mainly in the nonagricultural sector. The result will be a more stable and diversified economy. The County's growth occurs mainly within or adjacent to incorporated cities, and the Stanislaus County Board of Supervisors has maintained a policy of preserving agricultural lands.

Stanislaus County Population

<u>Year</u>	<u>Population</u>	<u>% Increase</u>
1989	346,393	15.73%
1990	365,119	5.41%
1991	382,289	4.70%
1992	394,978	3.32%
1993	404,731	2.47%
1994	413,400	2.14%
1995	411,268	-.52%
1996	416,127	1.18%
1997	419,480	.81%
1998	427,642	1.95%
1999	432,990	1.25%
2000	441,364	1.93%
2001	446,997	1.28%
2002	469,512	5.04%
2003	483,000	2.88%
2004	491,900	1.84%

Source: California Department of Finance

Incorporated Cities. The incorporated cities within Stanislaus County are Ceres, Hughson, Modesto, Newman, Oakdale, Patterson, Riverbank, Turlock and Waterford.

2000 Population By Ethnicity

California is a diverse state, and Stanislaus County is reflecting this reality every year. The table below quantifies the diversity.

Ethnic Category	Percentage of Population
White	54%
Hispanic	24%
Other	13%
Two or more races	4%
Asian	3%
African American	2%

Age Characteristics of Population

The age distribution for Stanislaus County has remained relatively constant over the past ten years. The senior population in the County showed a minor increase of 2.71% in the ages 65 plus between 1990 and 2000. Since 1990, the average age in Stanislaus County has increased from 29.2 years to 31.7 years of age in 2000. Department of Finance population projections suggest that by 2010 the present gap between the County and the State will widen. The County median age is expected to reach 30.9 while the State's will climb to 35. Based on this data, it is reasonable to conclude that while the population of California is not growing older as fast as the nation's population, the population of Stanislaus County is not aging as fast as the State's population. Therefore, the County will continue to house more families and households with children.

Gender Characteristics of Population

In 2000, there were more males (54,371) than females (52,419) in the unincorporated area of Stanislaus County. In addition, there are a larger number of women living to the age of 70. In 2000, the average age of women was almost 33 years old, whereas the average age of males was 30.5 years old.

EMPLOYMENT

Stanislaus County is located in the center of California and within 90 minutes of a large consumer and industrial market place. The economy includes agriculture, manufacturing, and a minimal amount of technology, consumer products, packaging, and food processing.

Stanislaus County ranks as one of the nations' top ten agricultural counties, producing over \$1.3 billion gross dollars and one-third of the County's jobs. The area is renowned for its agricultural productivity and crop diversity, due to the high quality farmland, affordable and adequate water supplies, extensive irrigation systems and temperate climate. This area leads California in the production of nearly two-dozen agricultural commodities, most notably almonds, chickens, cling peaches and walnuts. In addition, there is an abundance of grazing lands in the foothill areas of the County that are becoming increasingly important to cattle producers and dairy farmers. In terms of dollars produced from agriculture, the County ranks seventh in the State and ninth in the nation. For every dollar of actual agricultural production, \$3.50 in economic activity is generated through processing, packaging, marketing and retailing. Many of the agricultural products grown or processed in the County are produced for export to European markets as well as developing markets in the Pacific Rim. Many agricultural organizations are located in the County because of its access to major ports, highways, and railways.

Seasonal employment remains a prominent feature of the Stanislaus County economy, with agriculture and food processing continuing to serve as sources of reported unemployment, particularly during the winter months. However, there are more seasonal positions in faster growing industries as well, including retail trade, construction, and local government, each with its own seasonal dynamic. Not only have the traditional sources of seasonal employment become less dominant in the context of the entire economy, but also the newer sources have tended to spread employment throughout the year. This has reduced the volatile month-to month unemployment rate changes.

In spite of the strong agricultural economy and growing commuter population, the County still experiences double-digit unemployment. In March 2004, the County's jobless rate remained more than twice the State average at 13.2%, up slightly from 13.1% in March 2003.

Services will provide the greatest amount of jobs in terms of absolute growth and percentage change. Health, business, personal and hospitality services will provide 7,300 more jobs, an increase of 31%. Stanislaus County is estimated to have increased by 4,100 jobs (2.6% annually) between 2001 and 2002. The retail trade, government and construction industries represented 85.4% of the numeric increases.

Non-farm industry employment projections for the period of 2002-2007 indicate those services, government and retail trade will dominate the County's future economy. It is being forecasted that between 2002-2007 that these three industries will contribute over 90% of the total growth in employment for the County.

Although Stanislaus County is best known for its agriculture production, the local economy is becoming more diversified due to the migration of Bay Area workers seeking affordable housing. Stanislaus County will also continue to be influenced by the growth and economic trends of neighboring counties as new industry and more jobs serve to diversify the larger economy of the northern San Joaquin Valley. This growth will also bring problems that will require greater cooperation between the local governments. Water supplies and air quality are among the major concerns that could pose a threat to future economic prosperity. These will be the toughest issues to be faced as the entire San Joaquin Valley grows.

TRANSPORTATION

Surface Roadways

State Highways 99, 108, 120, 33 132 and Interstate 5 are the major transportation routes through the County. Highways 99, 33 and I-5 run north – south and Highways 108, 120 and 132 run east to west. These major highway/freeway routes would be utilized during an evacuation. The County's two limited access freeways run north and south, while the east-west routes are generally smaller and more congested. State Route 99, serving the greatest area of population density, crosses the Tuolumne and Stanislaus Rivers.

Public roadways and bridges within Stanislaus County are owned and maintained by the California Department of Transportation, Stanislaus County Public Works Department and the nine city Public Works Departments. A high potential exists for road closures due to severe winter storms or flooding. Parts of the County can become isolated for a period of time when these conditions exist. While most secondary roads are paved, there are still a number of unpaved public roads within the County.

Airports

There is one joint County/City of Modesto operated airport in Stanislaus County. Modesto Airport's runways are 5,911' and 3,459' respectively. The airport operates 24 hours daily, although the tower is closed at night. It is capable of multiple engine propeller aircraft or jet aircraft, as large as a 737-400. Additionally there are four additional airports in Stanislaus County; Oakdale Municipal Airport (2,400 foot east-west runway), Turlock Airpark (2,000 foot north-south runway), Patterson Airport (2,500 foot north-south runway) and the Crows Landing Naval Air Station, at present not an operating airport.

Rail

The Union Pacific and Burlington Northern Santa Fe Railroads are the freight lines serving Stanislaus County. Amtrak passenger service is provided on the BNSF track with a passenger station in eastern Modesto. Sierra Railroad serves between Tuolumne County and the City of Oakdale in Stanislaus County. Also, the Modesto and Empire Traction Company (M&ET), a shortline freight railroad, provides interconnection services between UP and BNSF Railroads, as well as serving the industrial hub of the County. M&ET operate 5 miles of yard main track and 39 miles of spurs and sidetracks. The major rail routes travel in a north-south direction and cross the Tuolumne and Stanislaus Rivers and Dry Creek.. The Union Pacific and BNSF rail rights of way are also the routes of major communications conduits and petroleum pipelines.

SCHOOLS

There are 36 school districts in the County. In addition to elementary and high school districts, Stanislaus County has the Yosemite College District with two junior college campuses. The County also has one four-year California State University campus in Turlock and Chapman University on State Route 99. The Stanislaus County Office of Education operates specialized schools for special education, alternative education and an outdoor education center. Most districts in the County are experiencing growth and many have added new facilities, are completing construction of new facilities, or are studying the feasibility of adding or replacing facilities within the next few years.

**Letter of Intent
(to develop a Local Hazard Mitigation Plan)**

Name of City/Special District/Jurisdiction: _____,
County of Stanislaus in the State of California.

The above named **City/Special District/Jurisdiction**, does not intend to develop a Local Hazard Mitigation Plan (LHMP), at this time. [The jurisdiction understands that it will not be eligible to receive mitigation project funding after November 1, 2004.]

The above named **City/Special District/Jurisdiction** intends to develop and submit for State review and FEMA approval, a LHMP, written in accordance with Section 322 of the Stafford Act, as indicated (Check One) below. (Please provide the name of the jurisdiction's LHMP contact person in the box provided below.)

Single Jurisdiction LHMP or a [x] Multi-Jurisdictional LHMP. (If Multi-Jurisdictional; Name of LEAD Jurisdiction: Stanislaus County.)

CONCERNING THE LHMP:

^{County} The above named City/Special District/Jurisdiction has begun development of a LHMP.
 The above named City/Special District/Jurisdiction will begin development of a LHMP by Date: _____.

The above named City/Special District/Jurisdiction does not have enough information to complete this Letter of Intent. Please contact the person listed below to provide clarifications or additional information to this Jurisdiction.

Signed: Patricia Hill Thomas Date: 8/10/04
(Council/Board Chair or Designated Representative) (Print name & title of signing official): Patricia Hill Thomas, Interim Chief Executive Officer

Name of Local Contact Person: Marnie Ardis & Gary Hinshaw

Title: Project Manager LHMP/Fire Warden

Telephone (209) 525 - 6532

E-mail address: ardism@mail.co.stanislaus.ca.us

**Please complete the enclosed *Letter of Intent* ASAP.
FAX to the OES Hazard Mitigation Section at (916) 845-8385 or 845-8386.**

THE BOARD OF SUPERVISORS OF THE COUNTY OF STANISLAUS
ACTION AGENDA SUMMARY

EPT: CHIEF EXECUTIVE OFFICE BOARD AGENDA# B-7
Urgent _____ Routine X
CEO Concurs with Recommendation YES Opt NO
(Information Attached) AGENDA DATE August 10, 2004
4/5 Vote Required YES NO ✓

SUBJECT:

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.

STAFF
RECOMMEN-
DATIONS:

AUTHORIZE STAFF TO FORWARD THE FIRST THREE PARTS OF THE LOCAL HAZARD MITIGATION PLAN TO THE STATE OFFICE OF EMERGENCY SERVICES FOR INITIAL REVIEW.

FISCAL
IMPACT:

The overall cost for development of this plan is being funded from existing appropriations in the Office of Emergency Services and the Chief Executive Office Operations budget primarily for staff time associated with preparation of this plan. The cost to develop the Geographical Information System (GIS) needed to complete the required risk assessment is anticipated to be \$19,500. This projected cost will be funded from existing appropriation within the Office of Emergency Services budget.

(Continued - page two)

BOARD ACTION AS FOLLOWS:

No. 2004-615

On motion of Supervisor Simon, Seconded by Supervisor Grover, and approved by the following vote,

Ayes: Supervisors: Paul Mayfield, Grover, Simon, and Chairman Caruso.

Noes: Supervisors: None.

Excused or Absent: Supervisors: None.

Abstaining: Supervisor: None.

1) X Approved as recommended

2) _____ Denied

3) _____ Approved as amended

4) _____ Other:

MOTION:

1010-08

CHRISTINE FERRARO TALLMAN, Clerk

File No.

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE
REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.
Page 2 of 6

FISCAL IMPACT CONTINUED:
Consequences of Non-Compliance

Executive Office staff will coordinate an effort to capture a portion of the costs necessary to maintain the GIS information that will be available to the other participating agencies. After November 1, 2004, all local governments in California will be required to have an approved Local Hazard Mitigation Plan (LHMP) in order to qualify for Federal mitigation funding. Unlike past years when a local plan was created after the disaster damage, this new program requires that an approved local plan be in place **BEFORE A DISASTER STRIKES.**

Local governments without an approved LHMP will not be eligible to receive Hazard Mitigation Grant Program Project Grants for disasters declared after November 1, 2004. Also affected by the November 1, 2004 date will be future mitigation project funding awarded through the Flood Mitigation Assistance Program, the Pre-Disaster Mitigation Grant Programs, and the U.S. Small Business Administration's low-interest, pre-disaster, small business loan program.

DISCUSSION:
Background

Stanislaus County intends to develop a Local Hazard Mitigation Plan in partnership with several jurisdictions in accordance with the Disaster Mitigation Act of 2000. The Local Hazard Mitigation Plan (LHMP) is considered the representation of the jurisdiction's commitment to reduce risks from natural hazards, and serves as a guide for decision-makers as they commit resources to reduce the effects of natural hazards. Local plans will also serve as the basis for the State to provide technical assistance and to prioritize project funding. This is one of the steps in creating a community more resilient to natural hazard events and disasters.

The Federal Emergency Management Agency (FEMA) has determined that there is a critical link between Hazard Mitigation Planning and sustainability. This means that if Stanislaus County has the foresight to plan ahead to reduce the impacts of hazards, we will be better able to prevent injury, loss of life and damage to our homes, businesses, and neighborhoods. The County can use the threat of disaster as a catalyst to act and develop a plan so we can bounce back more quickly following a disaster.

Local Hazard Mitigation Plans Shall Include:

Certain Prerequisites—includes the adoption of the final plan by the local governing body. This demonstrates the County's commitment to fulfilling the mitigation goals and objectives outlined in the plan.

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE
REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.
Page 3 of 6

Planning Process—documents the planning process used to develop the plan, including how it was prepared and who was involved in the process.

Risk Assessment—includes seven requirements:

Identify hazards

Profile hazardous events

Assess vulnerability—overview

Assess vulnerability—identify all County assets in terms of the types and numbers of existing and future buildings, infrastructure and critical facilities located in each of the five identified hazard areas

Assess vulnerability—estimate potential losses

Assess vulnerability—analyze development trends

Include other participating jurisdictions in the risk assessment.

Mitigation Strategy—provides the County's blueprint for reducing the potential losses identified in the risk assessment, based on existing authorities, policies, programs and resources and expand on and improve these existing tools. This entails the development of goals from which specific mitigation actions and projects will be derived. All mitigation actions must be prioritized according to cost and the plan must describe the strategy for implementation.

Plan Maintenance—describes the method and schedule for monitoring, evaluating and updating the plan every five years to make sure the plan remains an active and relevant document.

Additional State and Federal Requirements—recognizes additional requirements may create a new section for inclusion in the LHMP.

Partial Submittal of the LHMP

The State Office of Emergency Services (OES) has recommended that local jurisdictions provide a partial submission of the first three sections of the plan for initial review. OES has recommended the partial submittal approach because of the importance of completing the hazard identification, profiling and vulnerability assessments prior to identifying possible mitigation strategies.

Risk Assessment Requirement

Stanislaus County has identified several hazards that will be addressed in our Local Hazard Mitigation Plan. These hazards were identified through a process that utilized input from

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.

Page 4 of 6

the various multi-jurisdictional partners, work groups, Stanislaus County Emergency Operations Plan, the Safety Element of the General Plan, input from the Planning Director, Public Works Director, Assistant Director of Emergency Services, City governments and researching past disaster declarations in the County.

Stanislaus County has identified five natural hazards that will be addressed in our Local Hazard Mitigation Plan. They are:

- Earthquake
- Landslide
- Dam Failure
- Flood
- Wildfire

Geographical Information System (GIS)

As part of the Risk Assessment requirement of the LHMP, the County is responsible for identifying all County owned or leased structures and estimating potential losses, including the value of the contents when applicable. This inventory will provide limited benefits unless it is routinely updated to accurately reflect the status of properties owned by the County. Most of the inventory and risk data can be layered into the County's existing GIS system to provide nearly instant aggregation of asset values within specifically identified risk areas. This data can then easily be updated and made available in a live database to ensure that the information is current. A GIS-based solution will provide an interactive tool that can be easily shared with emergency responders and policy-makers in addition to supplying the preventative hazard mitigation-planning tool for development analysis purposes.

Use of the GIS system could also be expanded in the future to provide for automation of notification to responders for virtually any "emergency alert" situation such as evacuations. FEMA and the State Office of Emergency Services have suggested that the LHMP may be expanded to include additional risk threats in the future, and these additional risks could simply be "added" as layers to the County's GIS system rather than manually redrafting the LHMP.

Compilation of the data is an enormous task. The LHMP must include the five specified risks gauged at 22 levels. The asset inventory includes 143,043 individual parcels; 99 land use codes; 163 taxing agencies or districts; 2,135,080 square feet with 216 County-owned and occupied facilities. To complete the process manually would require an estimation of the percentage level of each risk type within each of 146 Assessor map book areas and manipulation of the Countywide parcel data. The County facilities and infrastructure inventory also has to be reviewed to identify the risk threats to each asset. Manually, this

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.

Page 5 of 6

effort would take between 500 and 1,000 person-hours, and the product would be a rough estimate of the assets at risk at a single point in time. The value of this effort would diminish over time as development occurs, property values change and additional risks are identified in the future.

Stanislaus County's LHMP Compliance Efforts

Most of the necessary data already exists to link the inventory of assets and hazard risks into the County's GIS system. Assistance is needed from Strategic Business Technology (SBT) to incorporate layers for property values, public facilities and hazard risks to meet the requirements of FEMA for the LHMP.

Use of the GIS system to develop the planning tools required by the LHMP will allow continuous updating of live information (such as assessor valuation and land use data) as properties are re-assessed and permits are pulled. This will allow the LHMP to be a dynamic and current planning tool for both the development process and emergency management operations.

Incorporating GIS tools into the County's LHMP will prove to be an extremely valuable asset regionally for emergency response, planning, economic development and risk management (public and private) purposes.

The Stanislaus County GIS Project will include:

- Five areas of hazard risks to be provided by the State OES;
- Assessor parcel use and value information for each parcel in the County;
- County facilities inventory and valuation information by Assessor Parcel Number;
- Public Works infrastructure data to be provided by Public Works;
- Security provisions to access and disseminate selected GIS data;
- Delivery of GIS data to the County Office of Emergency Services at fixed locations such as the Emergency Operations Center and Tenth Street Place Board Chambers; and
- Mobile access to GIS technology from Internet based wireless services and at offices and field locations.

Conclusion

Stanislaus County, as well as many of our local multi-jurisdictional partners, have sought Federal and State funding for reimbursement for repair, rebuilding or clean-up, following a large scale emergency or declared disaster. Most often the cost of rebuilding or repair exceeds what would have been the cost for preventive measures. This is especially true in the case of flood control projects (levees, control basins, floodwater channeling, etc.), road

APPROVAL FOR STANISLAUS COUNTY TO DEVELOP AND SUBMIT FOR STATE
REVIEW AND FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)
APPROVAL OF A MULTI-JURISDICTIONAL LOCAL HAZARD MITIGATION PLAN.

Page 6 of 6

and bridge projects, and similar programs. Many times the entire cost of the post-incident project cannot be fully recovered.

Mitigation projects are, in general, more cost effective, as well as providing a preemptive opportunity to minimize the impact of natural and man-made situations. Compliance with the Federal LHMP plan would insure Stanislaus County's eligibility to receive pre and post-event funds.

In recent years, the Federal government has placed an increased emphasis on pre-event mitigation measures as a means of not only reducing the cost associated with disaster incident reimbursement, but to make a significant effort to reduce the loss of life, property and resources associated with these occurrences.

POLICY ISSUE:

The development of the LHMP provides additional tools to assist emergency responders in development planning, consistent with the Board of Supervisor's top priorities to ensure a safe, healthy community and to facilitate economic development.

STAFFING IMPACT:

The Chief Executive Office will assign staff to complete the LHMP in conjunction with assistance from the Planning and Community Development Director, the Director of Public Works and the Assistant Director-Office of Emergency Services.

STANISLAUS COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN PLANNING PROCESS

DOCUMENTATION OF THE PLANNING PROCESS

Stanislaus County is developing a Multi-Jurisdictional Hazard Mitigation Plan in partnership with several jurisdictions. This is one of the steps in creating a community more resilient to natural hazard events and disasters.

The California Office of Emergency Services conducted an initial workshop December 4, 2003. Internal County participants and City Managers from the nine incorporated cities attended.

In March 2004, approximately 120 jurisdictions were invited to join the County in developing and preparing our multi-jurisdictional plan. These jurisdictions included:

Jurisdiction Invited	Number of Partners Invited
Mayors/City Managers	9 partners
School Districts	27 partners
Community Service Districts	8 partners
Fire Protection Districts	14 partners
Fire Services	4 partners
Police Services	6 partners
Hospital Districts	3 partners
Irrigation Districts	6 partners
Municipal Advisory Councils—MAC's	6 partners
Sanitary Districts	2 partners
Cemetery districts	3 partners
Drainage Districts	2 partners
Flood Control Districts	2 partners
Mosquito Abatement Districts	2 partners
Reclamation Districts	2 partners
Resource Conservation Districts	2 partners
Water Districts	7 partners
Stanislaus Economic Development and Workforce Alliance	1 partner

April 6, 2004, Gary Hinshaw, Assistant Director of Emergency Services, explained the new FEMA requirements. Sixty-three people representing various Cities, School Districts, Community Service Districts, Fire Protection Districts, Fire and Police Services, Hospital Districts, Irrigation Districts, Municipal Advisory Council's, Mosquito Abatement Districts, and Water Districts attended.

The County also has several internal contributors that will be instrumental in developing the plan. Participating and included are:

- Chief Executive Office-Operations, Purchasing and Capital Projects Divisions;
- Planning and Community Development;
- Public Works;
- Office of Emergency Services;
- Public Health;
- Environmental Resources
- Agriculture Commissioner; and
- Risk Management.

Task Force Leaders

Task Force leaders were selected and the first meeting was scheduled for April 21, 2004. Each participating jurisdiction was asked to analyze the impact and vulnerability to each of the five natural hazards that the County has identified.

Task Force	Members	Partners	Lead
Public Safety	Police Services Fire Services Fire Protection District	6 4 14	Dale Skiles-Salida Fire David Grant-MFD Adam Christianson
Public Health	Hospital Districts Mosquito Abatement	3 2	Sonya Harringfeld Renee Cartier
Schools	City and County	27	Scott Ousdahl
Public Works/Planning	Irrigation Districts Flood Control Reclamation Resource Conservation Water Districts	6 2 2 2 7	Ron Freitas Cindy VanEmpel
Community Services District	Community Service Districts Municipal Advisory Councils Sanitary Districts Cemetery Districts Drainage Districts	8 6 2 3 2	Raul Mendez
Administration	Mayors/City Managers Internal County players	9 16	Gary Hinshaw Marnie Ardis

On April 21, 2004, nine members of the Task Force met. Each member received a CDROM of the Hazard Maps obtained from Alan Kilgore of the State Office of Emergency Services. A copy of the Federal Regulations and the current draft of the County MJHMP were also distributed. The Project Manager stressed that each participating jurisdiction must perform a separate risk

assessment and customize their plan accordingly. Templates cannot be used. Jurisdictions that participate with the County can share information, however, each entity must analyze the hazards individually and specify their unique vulnerabilities.

The Task Force decided to break into smaller Work Groups to begin the process of identifying structures and estimating potential losses. The Project Manager suggested working with the County Assessor to determine values. The next meeting of the Task Force was scheduled May 19, 2004 at the Office of Emergency Services.

The Internal County Work Group met on April 26, 2004. Present were the Planning Director, Deputy Building Official, Capital Projects Lead and MJHMP Project Manager. The group reviewed the County hazard map and discussed the building inventory prepared by Tim Fedorchak of Capital Projects.

The Capital Projects Lead and MJHMP Project Manager also met with the County Assessor on April 26, 2004. The Assessor provided them with a database that identifies the land use, improvements, land value and improvement value of each parcel by tax agency and Assessor Parcel Number. The Assessor stated he would prepare an average value for each land use type. Capital Projects provided a list of County-owned and occupied offices, shops, warehouses, clinics and laboratories, including square footages and asset values by tenant and location.

The Task Force Leader representing the school districts organized a meeting on May 17, 2004. Twenty-seven school districts attended, along with the Assistant Director of Emergency Services and a representative from Capital Projects. A PowerPoint presentation was used to explain the methodology the County developed to identify structures and estimate potential losses. This same presentation was again shared with 12 members of the Task Force who met on May 19, 2004.

On May 18, 2004 the Internal County Work Group met with the Director of Strategic Business Technology to discuss the GIS Project. The County GIS expert will contact Alan Kilgore of the State OES to discuss the best way of sharing maps and existing resources to enhance the GIS Project currently being developed.

On May 24, 2004, the Capital Projects Lead and MJHMP Project Manager met with the Deputy Building Official of Public Works. We discussed the need to begin identifying infrastructure assets owned and operated by the County. Water treatment facilities, power generation facilities, landfills, wastewater treatment facilities, critical bridges, and lift stations must be identified and valued.

Risk Management was then contacted and asked to provide the Internal Work Group with a listing of the insured value of each facility owned by the County along with the value of the contents at each location.

GEOGRAPHICAL INFORMATION SYSTEM (GIS) PROJECT PLANNING

Compiling an inventory of County assets along with the appropriate values will be a time-consuming task. The inventory will provide limited benefits unless it is routinely updated to accurately reflect the status of properties owned by the County. Most of the inventory and risk data can be layered into the County's existing GIS system to provide nearly instant aggregation of asset values within specifically identified risk areas. This data could then easily be updated and made available in a live database to ensure that the information is current. A GIS-based solution will provide an interactive tool that can be easily shared with emergency responders and policy-makers *in addition to* supplying the preventative hazard mitigation-planning tool for development analysis purposes.

Use of the GIS system could also be expanded in the future to provide for automation of notification to responders for virtually any "emergency alert" situation such as evacuations. FEMA and the State Office of Emergency Services have suggested that the MJHMP may be expanded to include additional risk threats in the future, and these additional risks could simply be "added" as layers to the County's GIS system rather than manually redrafting the MJHMP.

Compilation of the data will be an enormous task. The MJHMP must include the five specified risks gauged at 22 levels. The asset inventory includes 143,043 individual parcels; 99 land use codes; 163 taxing agencies or districts; 2,135,080 square feet with 216 County-owned and occupied facilities. To complete the process manually would require an estimation of the percentage level of each risk type within each of 146 Assessor map book areas and manipulation of the Countywide parcel data. The County facilities and infrastructure inventory would have to be reviewed to identify the risk threats to each asset. Manually, this effort will take between 500 and 1,000 person-hours, and the product would be a rough estimate of the assets at risk at a single point in time. The value of this effort would diminish over time as development occurs, property values change and additional risks are identified in the future.

GIS Project Objective

The development of the MJHMP provides additional tools to assist emergency responders and in development planning, consistent with the Board of Supervisor's top priorities to ensure a safe, healthy community and to facilitate economic development.

Assistance is needed from Strategic Business Technology (SBT) to incorporate layers for property values, public facilities and hazard risks to meet the requirements of FEMA for the MJHMP. GIS system security requirements and access to the GIS at emergency response locations still needs to be resolved.

Use of the GIS system to develop the planning tools required by the MJHMP will allow continuous updating of live information (such as assessor valuation and land use data) as properties are re-assessed and permits are pulled. This will allow the MJHMP to be a dynamic and current planning tool for both the development process and emergency management operations.

Incorporating GIS tools into the County's MJHMP will prove to be an extremely valuable asset regionally for emergency response, planning, economic development and risk management (public and private) purposes. It is possible that future partnerships with businesses interested in protecting assets and tracking resources could offset a portion of the GIS system development costs through a subscription service program to authorized layers of information.

On May 18, 2004, the Assistant Director of Emergency Services authorized a Work Request for Strategic Business Technology to integrate new information into the County's GIS system.

The Stanislaus County GIS Project will include:

- Five areas of hazard risks to be provided by the State OES;
- Assessor parcel use and value information for each parcel in the County;
- County facilities inventory and valuation information by Assessor Parcel Number;
- Public Works infrastructure data to be provided by Public Works;
- Security provisions to access and disseminate selected GIS data;
- Delivery of GIS data to the County Office of Emergency Services at fixed locations such as the Emergency Operations Center and Tenth Street Place Board Chambers; and
- Mobile access to GIS technology from Internet based wireless services and at offices and field locations.

GIS Project Planning Meetings

GIS Planning Meetings were held on June 16, 17, and 18, 2004. Present were the Project Manager, Capital Projects, Assistant Director of Emergency Services, Personal Service Contractor, Public Works, Strategic Business Technology Director and GIS lead. The Project Manager also talked to the State GIS expert, Alan Kilgore, to discuss and order HAZUS to aid in the Risk Assessment.

A GIS Planning Meeting was held on June 29, 2004. Present were the Project Manager, Assistant Director of Emergency Services, Personal Service Contractor, Strategic Business Technology Director and GIS lead. The scope and objective of the project was discussed and refined. The timeline for delivery was shortened to meet the deadline for submittal to the State and FEMA. SBT estimated the cost to be \$19,500. The team is hopeful that the Multi-Jurisdictional Hazard Mitigation Plan will be considered an E-government project since it clearly meets the Board of Supervisors priorities of ensuring a safe and healthy community as well as promoting efficient government operations and achieving multi-jurisdictional cooperation.

On July 27, 2004, the Project Manager and Capital Projects met with the SBT Director and GIS lead. We reviewed the format of the reports and the progress of the project.

On August 10, 2004, the Project Manager and Capital Projects met with the SBT Director and GIS lead. We reviewed the progress of the project and the need to include other participating jurisdictions such as the City of Riverbank, City of Hughson, and City of Patterson. It was decided that the training on the GIS system be postponed until September to allow the Project Director and Capital Projects more time to focus on completing the risk assessment and developing the mitigation strategy.

On August 10, 2004, the Assistant Director of Emergency Services gave a PowerPoint presentation to the Board of Supervisors appraising them of the County's intent to participate as the lead agency in the Multi-Jurisdictional Hazard Mitigation Plan.

The Board of Supervisors was updated on the progress of the development of the Geographical Information System (GIS) needed to perform the complex requirements of the Risk Assessment. One of the board members asked if the GIS system used for the MJHMP was the same system developed by the Alliance. It is important that the differences be acknowledged and clarified.

The GIS maps and reports developed for the Multi-Jurisdictional Hazard Mitigation Plan (MJHMP) were created exclusively by the Stanislaus County, Strategic Business Technology Department. This system is not connected to, dependent on, or in any way related to the GIS system developed by California CAD Solutions for the Alliance project.

The GIS system used for the Multi-Jurisdictional Hazard Mitigation Plan is based on ESRI's ArcInfo software, and is capable of performing sophisticated GIS layer creation, analysis, and mapping tasks. ESRI's software is the County GIS standard, used by most, if not all other County departments actively involved in GIS—including Public Works, the Emergency Operations Center, and 911.

The Alliance project, however, was developed using the Autodesk MapGuide software—a browser based “inquiry only” type system with limited analysis and mapping capabilities. That project addressed the specific needs of the Alliance group, and runs on an entirely different server from any other County GIS system.

On August 19, 2004, the Assistant Director of Emergency Services and Project Manager provided an update on the progress of the MJHMP to the Stanislaus Operational Area Meeting. Seventeen people attended the meeting. The PowerPoint presentation given to the Board of Supervisors on August 10, 2004 was shown to the group and a question and answer session followed. Deadlines for the partial submission of the plan to the State OES were reviewed.

FORMAL DELINEATION OF INCLUDED AND EXCLUDED JURISDICTIONS

On July 1, 2004, the Project Manager sent an e-mail to all the multi-jurisdictional partners giving them a status report on the progress of the County's MJHMP. Each jurisdiction was asked to formally declare if they were going to participate with Stanislaus County. All participating multi-jurisdictional partners were invited to a meeting on July 13, 2004 at the Office of Emergency Services.

Sixteen people representing various participating jurisdictions attended the meeting on July 13, 2004. Capital Projects gave a presentation of the Excel spreadsheet that was developed to capture the tax-exempt existing and future facilities that are owned or leased by Stanislaus County and the City of Modesto. The County Assessor has provided the County with the assessed value for all taxed property. Each multi-jurisdictional partner was asked to prepare a spreadsheet cataloging the tax-exempt properties that their respective jurisdiction owns or leases. Ken Miller, the County GIS expert, will then incorporate and utilize this information to prepare maps and build the layers for the hazards identified in the risk assessment.

**STANISLAUS COUNTY

LOCAL HAZARD MITIGATION PLAN/MULTI-JURISDICTIONAL PARTNERS
IDENTIFYING LOCAL HAZARDS
APRIL 6, 2004

FEMA requires that your attendance and participation in the development of the multi-jurisdictional LHMP be documented. Each individual jurisdiction should also document their own participation and contribution throughout the planning process. Each jurisdiction that is included in the plan must have its governing body adopt the local plan as their "own" before the final submission to the State and FEMA.

 - ◆ Council Meetings
 - ◆ Board Meeting

IV. Next Meeting Date

**Hazard Mitigation
Task Force Leaders
Meeting
April 21, 2004**

I. Working Plan

There can be no use of templates. Each plan by each agency must be customized. Each district must say they looked at each hazard and note if they are unique or the same as the county.

Modesto City Schools will work with all of the other twenty-six school districts as well as the City of Modesto because of the adjacent parks to the school sites.

A question was raised regarding the difference between the cost to replace a structure verses the cost to relocate and operate while waiting for the structure to be rebuilt.

Is the funding limited only to the dollar amount listed? The Federal Register implies that the complete costs should be listed to present a full picture.

More printed maps of the hazards are needed for the team leaders.

II. Meeting Schedule

Next Team Leader Meeting will be held on May 19, at 2:00 p.m. in the Logistics Room on Oakdale Road.

**LOCAL HAZARD MITIGATION PLAN/MULTI-JURISDICTIONAL PARTNERS

STANISLAUS COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN RISK ASSESSMENT

Stanislaus County has identified several hazards that will be addressed in our Multi-Jurisdictional Hazard Mitigation Plan. These hazards were identified through a process that utilized input from the various multi-jurisdictional partners, Work Groups, Stanislaus County Emergency Operations Plan, the Safety Element of the General Plan, input from the Planning Director, Public Works Director, Public Health Director, Assistant Director of Emergency Services, City governments, researching past disaster declarations in the County and public input.

In addition, the County's Strategic Business Technology Division of the Chief Executive Office is developing a Geographical Information System (GIS) database that will map the County's infrastructure, critical facilities, and land uses. Initial data from this study was also used to determine those hazards that present the greatest risk to the County.

Stanislaus County has identified five natural hazards. These initial hazards were identified because they have the greatest potential to cause a negative impact on the community.

They are:

- Earthquake
- Landslide
- Dam Failure
- Flood
- Wildfire

Stanislaus County is also susceptible to agricultural emergencies resulting from weather related issues such as drought, severe winter storms and high winds. However, these natural hazards are not referenced in the County Emergency Operations Plan or the Safety Element of the General Plan. Due to scarce resources, limited timeframe and inadequate information it would be difficult to analyze these additional hazards. Consequently, these other three hazards will be covered in the future when the County revises our initial Hazard Mitigation Plan.

The Risk Assessment component of the Multi-Jurisdictional Hazard Mitigation Plan includes the following subsections:

Identifying Hazards—includes a description of the types of all natural hazards.

Profiling Hazard Events—identifies the location, extent, previous occurrences and probability of future events.

Assessing Vulnerability/Overview—identifies an overall summary description of vulnerability to each hazard and the impact of each hazard on the jurisdiction.

Assessing Vulnerability/Identifying Structures—includes the types and numbers of existing and future buildings, infrastructure, and critical facilities located in the identified hazard areas.

Assessing Vulnerability/Estimating Potential Losses—includes estimates of potential dollar losses to vulnerable structures and describes the methodology used to prepare the estimate.

Assessing Vulnerability/Analyzing Development Trends—includes the land uses and development trends.

Multi-Jurisdictional Risk Assessment—each participating jurisdiction has included their varied and unique risks if different from the County's.

IDENTIFY—EARTHQUAKE HAZARD

NATURAL HAZARD	HOW IDENTIFIED	WHY IDENTIFIED
EARTHQUAKE	<ul style="list-style-type: none">• County General Plan Safety Element• County Emergency Operations Plan• Input from Planning Director• Input from Public Works Director• Risk Assessments	<ul style="list-style-type: none">• Previous occurrences• Potential to cause harm

PROFILE—EARTHQUAKE HAZARD EVENTS

There are several faults known to exist within Stanislaus County. In the extreme eastern part of the County, the Bear Mountain and Melones faults are found, though believed to have been inactive for the past 150 million years. No faults are currently known to exist within the valley floor portion of the County. Within the Diablo Range, the most recent movements were along the Tesla-Ortigalita fault approximately five million years ago, although earthquake activity without surface fracturing or faulting is still common.

Since 1930, one earthquake epicenter of a magnitude greater than 4.0 on the Richter Scale was recorded in Stanislaus County. On June 27, 1986, an earthquake with a magnitude of 3.7 on the Richter Scale occurred with an epicenter several miles west of Crows Landing. Future earthquakes of similar or greater magnitudes can be expected.

Numerous earthquakes occur each year along California's major faults that are the San Andreas, Calaveras, Hayward and the Nacimiento faults. Information furnished by the State Department of Mines and Geology and the State Office of Emergency Services indicate that ground shaking along these faults can produce damage within the County to reach varying intensities rated on the Modified Mercalli Intensity Scale of 1931. The eastern half of the County can be expected to have shaking to an intensity of VI or VII, producing minor to moderate damage. The western half of the County can expect to receive shaking to an intensity of VII to VIII Mercalli, which can cause considerable damage to ordinary structures. The area around the City of Newman may have shaking intensity of IX or X. This may be considered a major hazard area.

The State of California Division of Mines and Geology has published proposed maps of an area to be included in an Alquist-Priolo Special Studies Zone. The area is along the Ortigalita Fault in the Diablo Range and extends into Stanislaus County approximately 7 miles. The zone is 1000 feet wide centered on the identified fault. As an Alquist-Priolo Special Study Zone, development and parcel divisions cannot be approved on land within this zone unless a geological report is completed at the applicant's expense and reviewed by another geologist hired by the County. The maps became effective on July 1, 1986. The text of the Alquist-Priolo Special Studies Zones Act can be found in Section 660 et. seq. of Article 3, Chapter 2, Division 1 of the California Public Resources Code. Guidelines for implementation of the Act are found in Section 3500, Article 3, Subchapter 1, Chapter 8, Division 2, Title 14 of the California Administrative Code.

ASSESS EARTHQUAKE VULNERABILITY/OVERVIEW

Stanislaus County is not known for its seismic activity, but it is still important that we plan for a potential earthquake disaster. Although there are no major faults in the valley portion of Stanislaus County, some faults do exist in the foothills on the eastern and western edges of the County. Earthquakes could occur that would cause severe damage in portions of the County. We do not anticipate major epicenters, but major damage could occur as a result of shaking and aftershocks from other areas. Structures built prior to 1976 will have a greater risk of damage during earthquake activity due to building designs and seismic requirements being less stringent. However, west of Interstate 5, the building codes are more restrictive due to seismic requirements.

In any earthquake, the primary consideration is saving lives. Time and effort must also be given to providing for people's mental health by reuniting families, providing shelter to the displaced persons and restoring basic needs and services. A major effort will be needed to remove debris and clear roadways, demolish unsafe structures, assist in reestablishing public services and utilities and provide continuing care and temporary housing for affected citizens.

ASSESS EARTHQUAKE VULNERABILITY/IDENTIFYING STRUCTURES

Stanislaus County occupies 91 facilities totaling an estimated 2,790,936 square feet, including both owned and leased facilities. The total estimated property value as of 2004 is \$394,688,971. Including the value of building contents, rental and lease income, the total value of all County occupied facilities is an estimated \$497,804,369.

The vast majority of the County occupied space is collocated with the highest population density along the State Route 99 corridor in Salida, Modesto, Ceres and Turlock. This area is located within a shaking intensity zone of 21-30% gravity spectral acceleration (one-second period). Of most critical concern are County operated facilities located in the area of greatest probabilistic shaking potential (41-50% gravity), located in Patterson and west of Crows Landing. Of the five facilities located in Patterson, the County Library and Public Works yard are owned, and the Women Infants and Children (WIC) office and the Behavioral Health and Recovery Services offices are leased. The fifth facility, Frank Raines Regional Park, contains only restroom and passive recreation structures and non-critical infrastructure. The Library is collocated with the

Patterson City Council Chambers in a County-owned space at 46 West Salido and could provide interim emergency use as a coordination or assistance center. The Public Works yard at 301 South First Street is a field office and shop location for Road Maintenance functions.

The County's Fink Road Landfill is also located in the area of greatest probabilistic shaking potential (41-50% gravity) west of Crows Landing and Interstate 5. The landfill is collocated with a waste-to-energy facility, and could be of critical use in situations where safe disposal is required after emergency events. Other than non-critical scales and miscellaneous out buildings, the landfill itself is unlikely to be physically compromised in a seismic event. Exhibit E-1 graphically illustrates the probabilistic ground shaking intensity in terms of ground acceleration in a one-second period as a percentage of the force of gravity.

A map of County operated facilities by seismic risk zone is located in Exhibits E-2, E-3 and E-4. Exhibit E-2 identifies the location of existing County occupied facilities (owned and leased) generally in the northern portion of the county, including Oakdale, Riverbank, Modesto, Ceres and the surrounding areas. The color-keyed zones listed in the legend of Exhibit E-1 are also keyed to the colored zones in each of the other earthquake risk maps. Exhibit E-3 provides graphical reference to existing County occupied facilities in the southern portion of the county, including Turlock, Waterford, Patterson, Crows Landing and Newman.

Future planned County facilities are noted in Exhibit E-4 by estimated total value. These projects are included in the County's Preliminary Capital Improvements Plan for Fiscal Year 2003-2005 where such facilities have a specifically identified site. Many other capital projects are included in the CIP document, but specific sites have not been selected for these projects. The site selection process for all future County projects does now and will always include consideration of local hazard risk mitigation as a criteria.

ASSESS EARTHQUAKE VULNERABILITY/ESTIMATING POTENTIAL LOSSES

All property within Stanislaus County is subject to the effect of seismic activity. Hazard maps provided by the State Office of Emergency Services the probabilistic shaking potential of populated lands within Stanislaus County at a spectral acceleration one second period of up to 50% the force of gravity. The maps, shown in Exhibit E-1 through E-4, delineates five zones in ten percent increments of shaking intensity, with the greatest intensity along the western-most edge of the valley floor near the Interstate 5 corridor. Probabilistic ground shaking intensity is shown on each map by colored zone, keyed to the legend in Exhibit E-1.

Exhibit E-4 provides a single county-wide graphic illustrating the probabilistic shaking intensity increment. The map legend identified the shaking intensity increments as follows:

Probabilistic Shaking Intensity (1 sec. ground acceleration) (Percent of 1.00 Gravity)	Exhibit E-1 Map Legend Reference (Mid-Point of Shaking Intensity Increment-)
1% to 10%	5%
11% to 20%	15%
21% to 30%	25%
31% to 40%	35%
41% to 50%	45%

The greatest population density within Stanislaus County exists along the State Route 99 corridor within an area designated at a 21-30% gravity in a one second spectral acceleration period. The maps in Exhibits E-1 through E-4 identify the mid-point of the ten percent shaking intensity increments.

Appendix A summarizes the number and total value of parcels within each of the increments of shaking intensity. General land use designations are identified for properties within each zone. The total value of parcels indicates the sum of the value of the land, fixed improvements, growing improvements (for agricultural producing lands), structural improvements, personal property (for commercial enterprises) and mobile homes. The actual value of the risk may be dependent on the specific hazard event, since it is unlikely that the total value of all land and property would be lost in any given event. For example, land values could be unaffected while structural improvements could be lost in a specific seismic event. In another case, agricultural production could be lost for a growing season due to uprooted orchard property, loss of irrigation capability, etc.

A detailed listing of the risk zones, land uses, number of parcels and specific valuation is listed in Exhibit E-5 and in detail in Appendix A.

Population and Housing. All of Stanislaus County's estimated 446,997 population and 150,807 housing units are located within a seismic risk area designated as having a probabilistic shaking intensity between 1% and 50% gravity according to the State provide seismic risk map. Exhibit E-6 identifies the number of housing units and population residing within each risk increment within the unincorporated areas of Stanislaus County.

Appendix A provides a detailed identification of the number of housing units and population within each seismic risk increment by jurisdiction for unincorporated Stanislaus County and the nine incorporated cities within the county.

Interactive Resources. Stanislaus County has incorporated risk data supplied from the State of California Office of Emergency Services, property valuation and land use data, and County facilities data into layers within a secured geographic information system (GIS) database to provide specific risk and value data pertaining to a specific seismic event. The GIS system allows authorized users to define a specific area within the county and to rapidly identify land use, ownership, population, housing and valuation data for all included properties. Specific County-operated facilities and infrastructure are also layered into the GIS system. Property valuation and land use data is updated live as the County Assessor conducts property appraisals as the system is linked directly to the Assessor's database. County facilities and infrastructure are updated periodically as changes occur.

The County is working to add layers to the GIS system to identify potential resources (such as location and capacity of possible shelters and medical care facilities) in the near future.

ASSESS EARTHQUAKE VULNERABILITY/ANALYZING DEVELOPMENT TRENDS

Most development is occurring on the valley floor within cities or within spheres of influence in cities. Very little development is taking place in agricultural areas. West of Interstate 5, there is very little development except the Diablo Grande project which must comply with new building codes and regulations.

The General Plan provides for diverse land use needs by designating patterns that are responsive to the physical characteristics of the land. The Planning Department has a policy that urban development shall be prohibited in geological fault areas unless measures to mitigate the problem are included as part of the development application. The County enforces the provisions of the Alquist-Priolo Earthquake Fault Zoning Act that limits development in areas identified as having special seismic hazards. Construction is prohibited without a geologic study.

New buildings in Stanislaus County are constructed to prevent loss of life as a result of an earthquake. Older buildings, however, especially non-reinforced masonry buildings, could collapse causing injury and loss of life. In order to eliminate these problems, it is necessary to require reconstruction to at least provide for the adequacy of: (a) non-reinforced masonry bearing walls, (b) the anchorage of exterior parapets and ornamentation, (c) the anchorage of non-reinforced bearing walls to the floors and roof, (d) floor and roof diaphragms, and (e) the development of a complete bracing system to resist horizontal wind and earthquake forces.

MULTI-JURISDICTIONAL EARTHQUAKE RISK ASSESSMENT

See Volumes Two and Three for assessments from participating multi-jurisdictional partners.

IDENTIFY—LANDSLIDE HAZARD

NATURAL HAZARD	HOW IDENTIFIED	WHY IDENTIFIED
LANDSLIDE	<ul style="list-style-type: none">• California proclaimed State of Emergency• County General Plan Safety Element• County Emergency Operations Plan• Input from Planning Director• Input from Public Works Director• Risk Assessments	<ul style="list-style-type: none">• Previous occurrences

PROFILE—LANDSLIDE EVENTS

Virtually the entire area located west of Interstate 5 is composed of geological formations that, due to structure, slope, runoff, lack of vegetation, earthquake and human activity, are considered extremely susceptible to failure and sliding.

In the winter of 1982-83, saturation of the soil in this area resulted in a considerable amount of damage to Del Puerto Canyon Road. There is a history of a number of slides throughout the Diablo Range in Stanislaus County. It is evident that the steep slopes and undesirable geology or the area on the west side of the County, even without considering the very real possibility of an earthquake, present substantial risks in certain conditions.

ASSESS LANDSLIDE VULNERABILITY/OVERVIEW

On a California Division of Mines and Geology scale used to rate landslide potential, this area is rated at five, the next to highest rating on a scale of six. The remainder of the area is rated at six. The prime reason is the generally unstable formation comprising the underlying geologic structure of the Diablo Range.

ASSESS LANDSLIDE VULNERABILITY/IDENTIFYING STRUCTURES

Hazards due to landslide events are mostly limited to areas within the foothills at the western and eastern edges of Stanislaus County, and along specific river bluff regions near rivers and streams. Those areas near rivers and streams are subject to natural erosion, although erosion activity may be increased during flood events.

No County occupied buildings other than non-critical "out" structures are located at sites having a landslide risk. County infrastructure (roads, utilities, drainage and bridge structures) may be subjected to landslide hazards; however, most landslide threats are limited in scale to a specific point.

Several State highways traverse cuts through hillsides or along river bluffs where landslide hazards may pose a risk, including State Routes 4, 108, 120, 132, 219 and Interstate 5. County roads at risk include:

Ingram Creek Road	Roberts Ferry Road
Del Puerto Canyon Road	Lake Road
Diablo Grande Parkway	Warnerville Road
Orestimba Road	Crabtree Road
Crows Landing Road-at San Joaquin River	La Grange Road
South Carpenter Road	Cooperstown Road
Grayson Road (at San Joaquin River)	Los Cerritos Road
Paradise Road (at San Joaquin River)	River Road (Ceres area)
Shiloh Road (at Tuolumne River)	Mitchell Road (at Tuolumne River)
Santa Fe Avenue	Hills Ferry Road
Geer/Albers Roads	

ASSESS LANDSLIDE VULNERABILITY/ESTIMATING POTENTIAL LOSSES

In the event of a specific landslide event, the County's GIS system Multi-Jurisdictional Hazard Mitigation Plan layers can quickly identify land use, population, valuation risks interactively with emergency response officials.

ASSESS LANDSLIDE VULNERABILITY/ANALYZING DEVELOPMENT TRENDS

Construction is possible west of Interstate 5, but any proposals for significant development (anything other than the currently permitted two dwellings for every 160 acres), should include a geological report identifying potential problems and mitigation measures to be incorporated into the development plan.

The County shall utilize the California Environmental Quality Act (CEQA) process to ensure that development does not occur that would be especially susceptible to landslides. Most discretionary projects require review for compliance with CEQA. As part of this review, potential impacts must be identified and mitigated or a statement of overriding concerns adopted.

The routes of new public roads in areas subject to landslides shall be designed to minimize landslide risks.

MULTI-JURISDICTIONAL LANDSLIDE RISK ASSESSMENT

See Volumes Two and Three for the landslide risk assessment from participating multi-jurisdictional partners.

STANISLAUS COUNTY
MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN
RISK ASSESSMENT

IDENTIFY—DAM FAILURE/INUNDATION HAZARD

NATURAL HAZARD	HOW IDENTIFIED	WHY IDENTIFIED
DAM FAILURE	<ul style="list-style-type: none">• County General Plan Safety Element• County Emergency Operations Plan	<ul style="list-style-type: none">• Potential to cause devastation.

PROFILE—DAM FAILURE

Three major dams have a direct effect on Stanislaus County. LaGrange Dam, located in the eastern corner of Stanislaus County, is situated on the Tuolumne River just above the town of LaGrange and operated by the Modesto and Turlock Irrigation Districts.

Don Pedro Dam is located in Tuolumne County on the upper Tuolumne River. It has a gross pool capacity of 2,030,000 acre feet and is operated jointly by the Modesto and Turlock Irrigation Districts and the City of San Francisco.

New Melones Dam, located in both Tuolumne and Calaveras Counties, is located on the Stanislaus River and operated by the U.S. Bureau of Reclamation. Gross pool capacity of New Melones is 2,420,000 acre feet.

Dam failure is the collapse or failure of an impoundment that causes significant downstream flooding. Flooding of the area below the dam may occur as the result of structural failure or overtopping of the dam.

A severe storm, earthquake or erosion of the embankment and foundation leakage may cause the collapse and structural failure of Dams in or adjacent to Stanislaus County. Seismic activity may also cause inundation by the action of a seismically induced wave that overtops the dam without causing failure of the dam, but significant flooding downstream. Landslides flowing into Lakes and Reservoirs may also cause dams to fail or overtop.

There have been no previous occurrences.

Don Pedro Dam/Floods of 1997

Don Pedro/Spillway/Floods of 1997

ASSESS DAM FAILURE VULNERABILITY/OVERVIEW

The catastrophic failure of New Melones, Don Pedro or LaGrange dams will have severe consequences. Foremost, are injuries, loss of life, limited transportation routes and a decrease in vital utilities. Additionally, because of Stanislaus County's strong agricultural influences significant downstream property damage and the loss of domestic and farm production animals will be a major concern.

There are a number of dams, both in and out of the County on the east and west sides, which could produce flooding should they fail. There are requirements that the owners of dams prepare maps showing areas, which would be flooded, should the dams fail. For purposes of emergency preparedness, areas expected to be inundated, should a failure occur are depicted "Dam Failure Inundation Areas." More specific emergency preparedness information and potential hazards can be found in the individual Emergency Plans for each dam. These plans are available at the Office of Emergency Services and will be available in the EOC when activated.

ASSESS DAM FAILURE VULNERABILITY/IDENTIFYING STRUCTURES

Facilities affected by a dam failure are:

- Modesto City/County Airport
- Bridges
- Highways
- Hospitals
- Schools
- Utilities
- Emergency Services
- Agriculture
- Sanitation
- Residential
- Domestic Water Supply

ASSESS DAM FAILURE VULNERABILITY/ESTIMATING POTENTIAL LOSSES

Inundation due to dam failure within the San Joaquin Valley is a low-probability but high-risk hazard. The potential risk for inundation of property is present in nearly all of the developed areas of Stanislaus County; however, catastrophic failure or flooding release of water from multiple dams at a single point in time is considered to be extremely unlikely. Those dams presenting an inundation risk for Stanislaus County are Exchequer Reservoir; Pine Flat Reservoir; San Luis Reservoir; New Melones Reservoir; Tulloch Reservoir; Don Pedro Reservoir and La Grange dam.

Exhibit I-1 presents an overview of dam inundation hazard zones within Stanislaus County.

Exhibits I-2, I-3 and I-4 illustrate the areas of risk from inundation from those reservoirs presenting the greatest risk. Exhibits I-2 and I-3 present the inundation risk within the northern and southern portions of the county, respectively. Exhibit I-4 depicts the location of planned future facilities included within the County's Preliminary Capital Improvement Plan for Fiscal Year 2003-2005 where the sites of planned facilities are known. (Sites of other planned future projects have not yet been identified. Mitigation of local hazards will be considered in the siting of all new County occupied facilities.)

The table in Exhibit I-5 summarizes the number of housing units, population and total property values at risk from inundation by source.

Exhibit I-5

Summary of Dam Failure / Inundation Risks in Stanislaus County

Housing Units, Population and Valuation By Inundation Source, 2004

Dam/Land Use	Population	Housing Units	Total Value	Reference
Don Pedro Dam	23,556	7,662	\$2,195,709,344	Appendix C
Exchequer Dam	9,609	3,082	\$557,516,872	Appendix D
New Melones Dam	41,096	13,737	\$3,242,197,778	Appendix E
Pine Flat Dam	3,821	1,120	\$168,325,563	Appendix F
San Luis Dam	14,312	4,568	\$819,457,159	Appendix G
Tulloch Dam	17,876	5,779	\$1,070,616,263	Appendix H

Reference Appendices C through H as noted in Exhibit I-5 for detailed identification of land uses, valuation, housing and population data by inundation source and jurisdiction within Stanislaus County.

Interactive Resources. Stanislaus County has incorporated risk data supplied from the State of California Office of Emergency Services, property valuation and land use data, and County facilities data into layers within a secured geographic information system (GIS) database to provide specific risk and value data pertaining to an inundation event. The GIS system allows authorized users to define a specific area within the county and to rapidly identify land use, ownership, population, housing and valuation data for all included properties. Specific County-operated facilities and infrastructure are also layered into the GIS system. Property valuation and land use data is updated live as the County Assessor conducts property appraisals as the system is linked directly to the Assessor's database. County facilities and infrastructure are updated periodically as changes occur.

Exhibit I-1

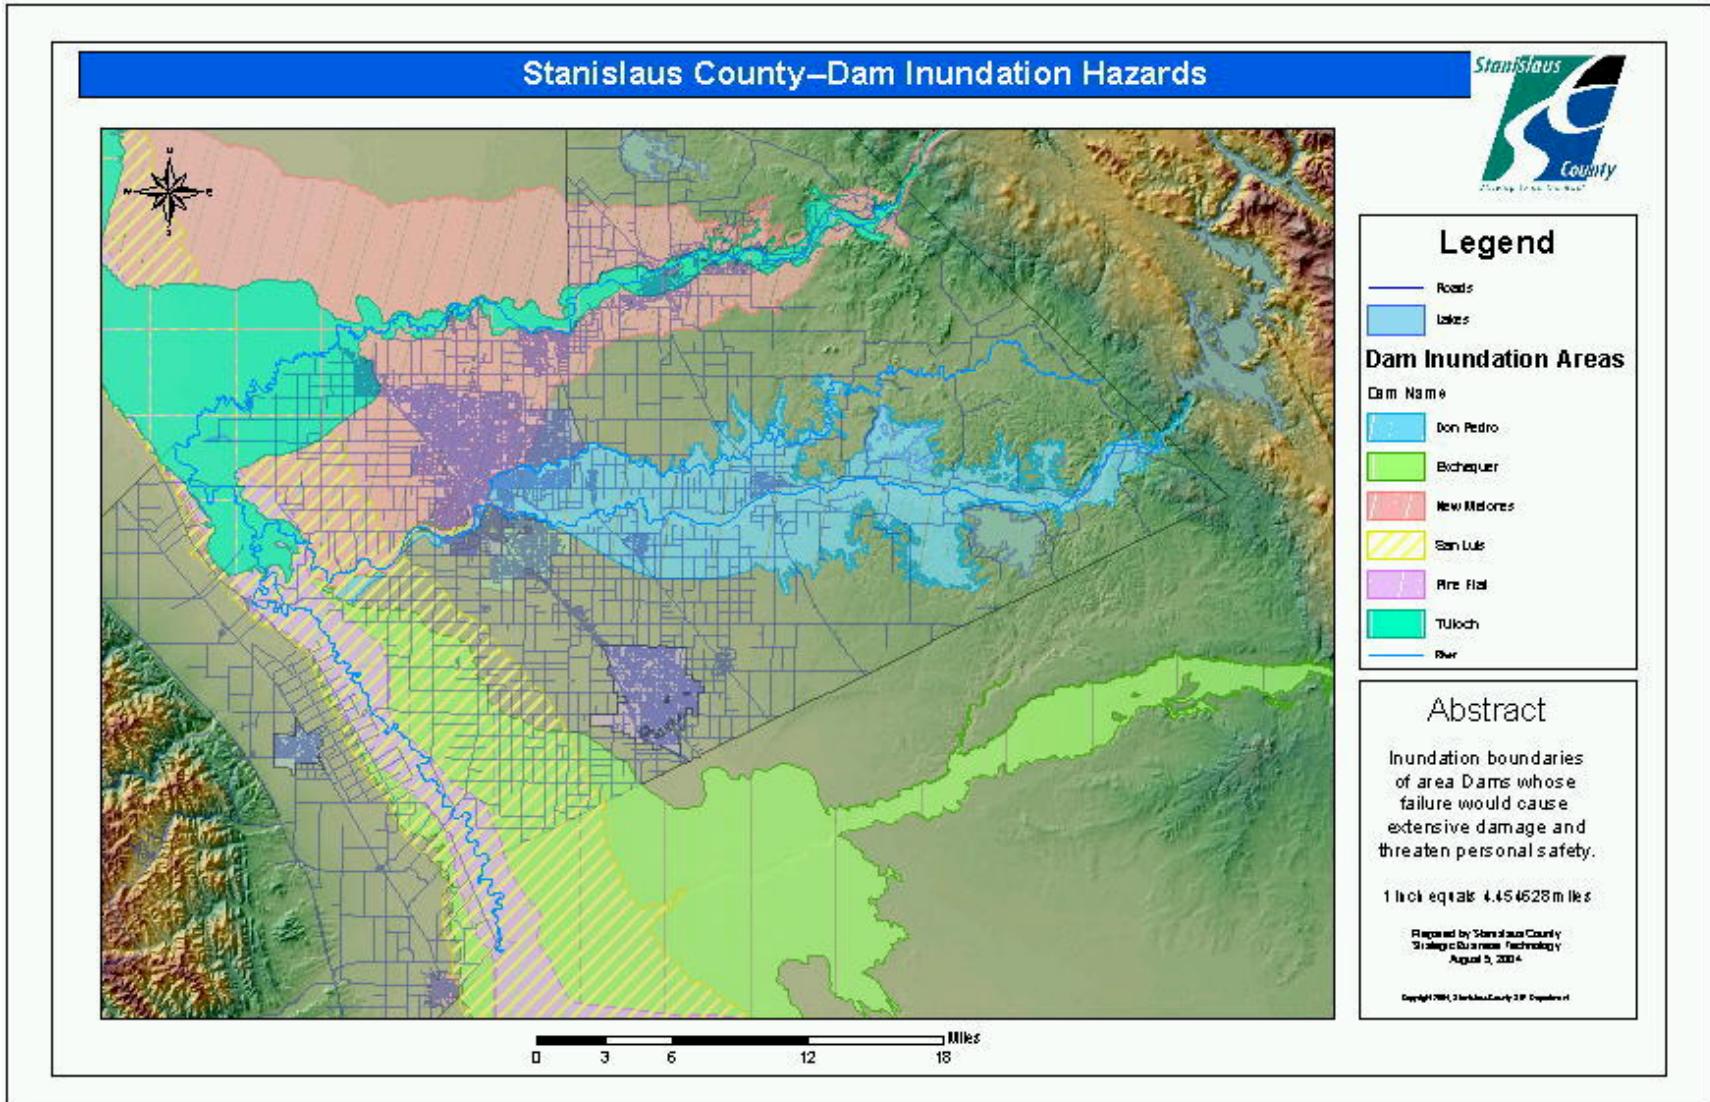

Exhibit I-2

Stanislaus County (North) Facilities Map -- Dam Inundation Hazard

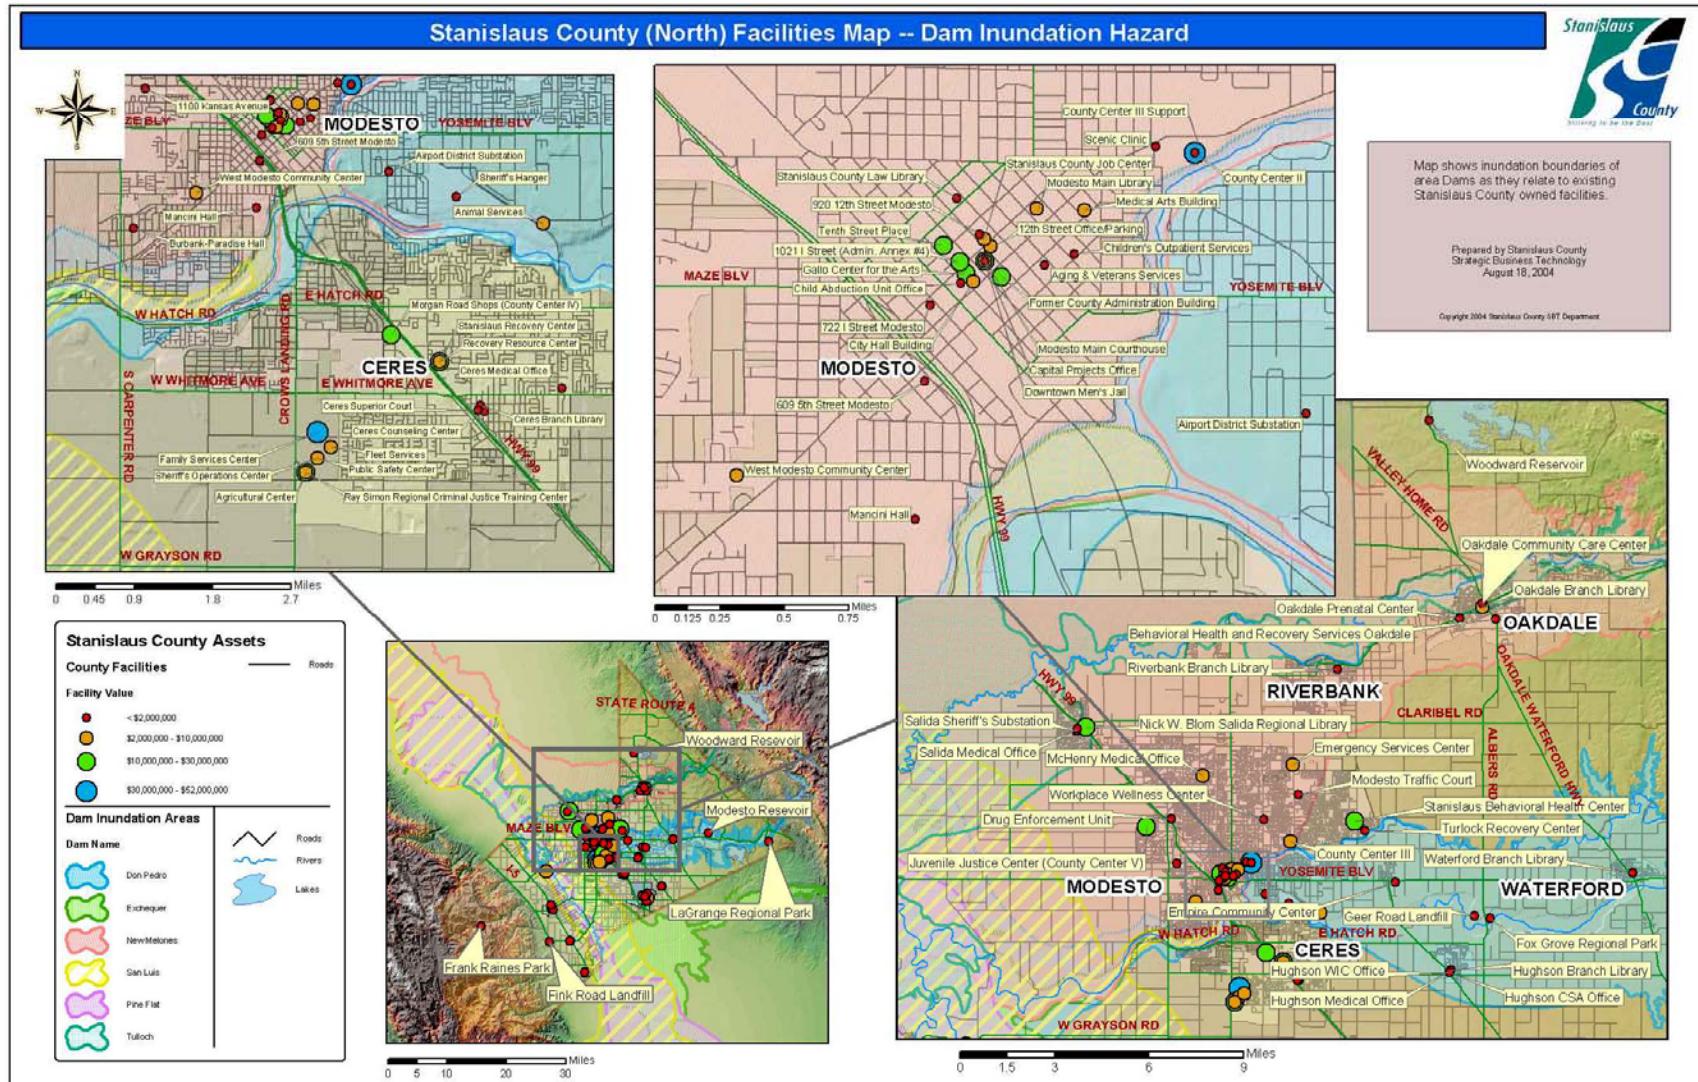

Exhibit I-3

Stanislaus County (South) Facilities Map -- Dam Inundation Hazard

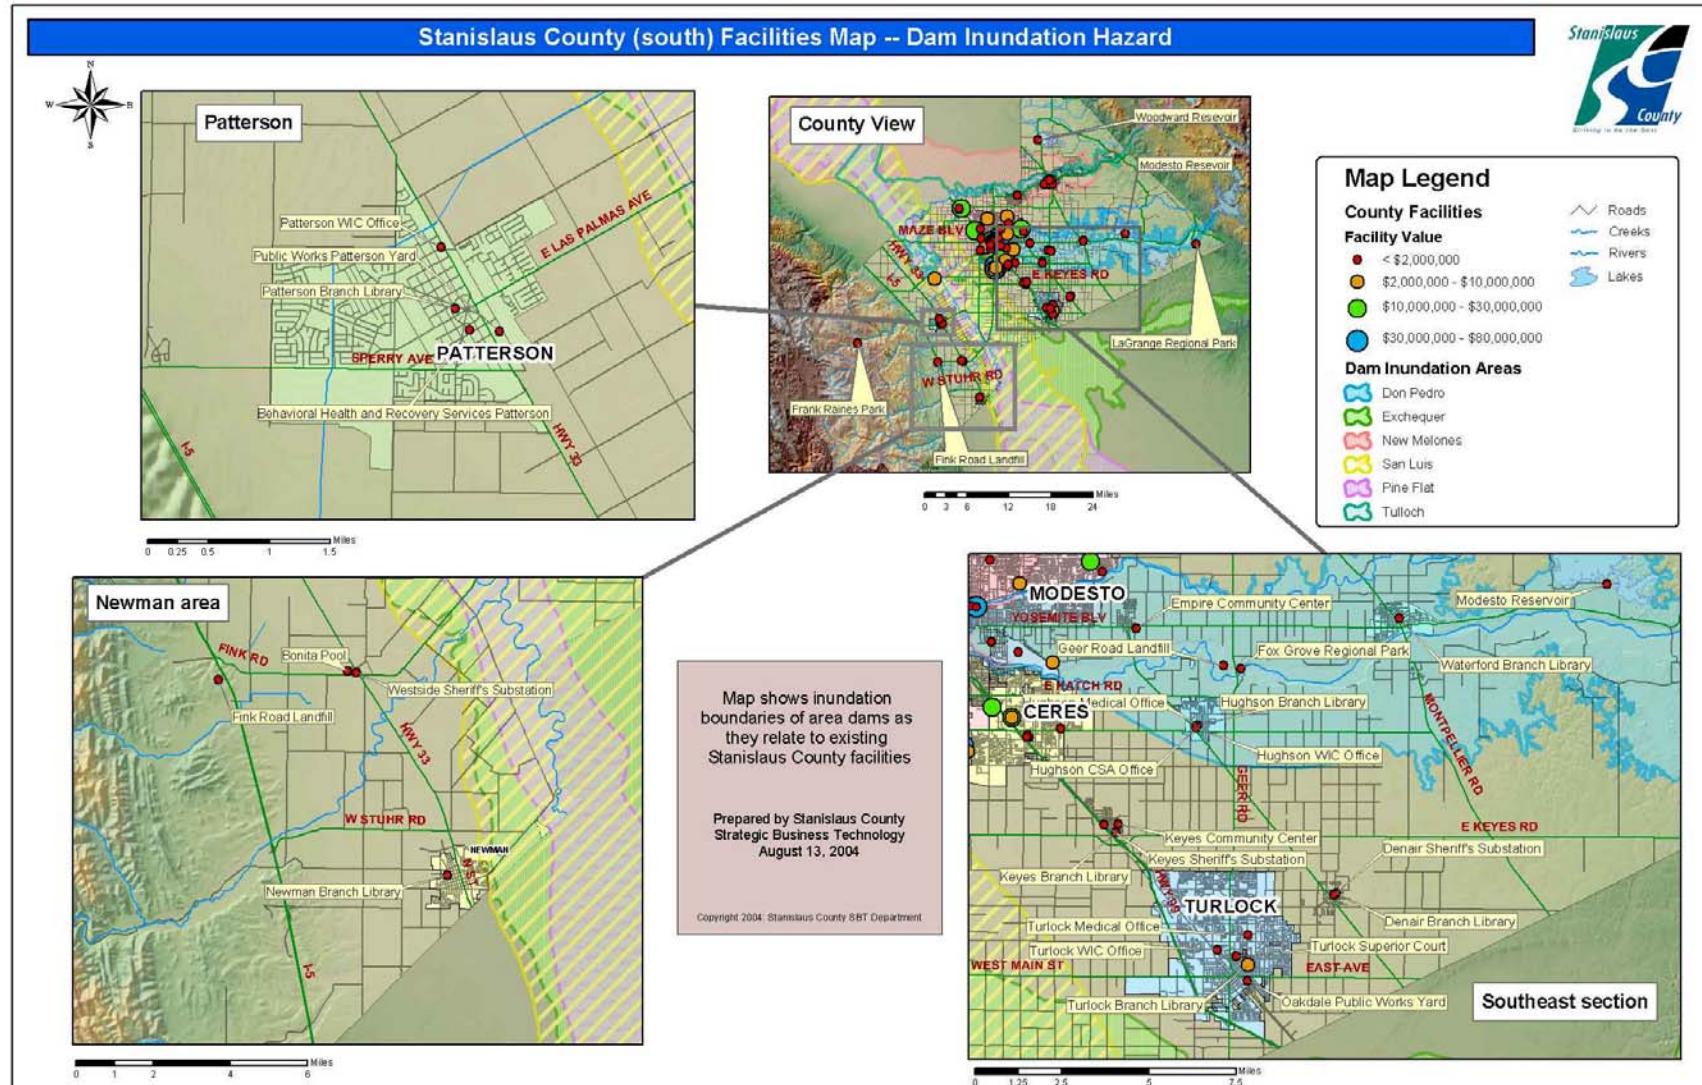

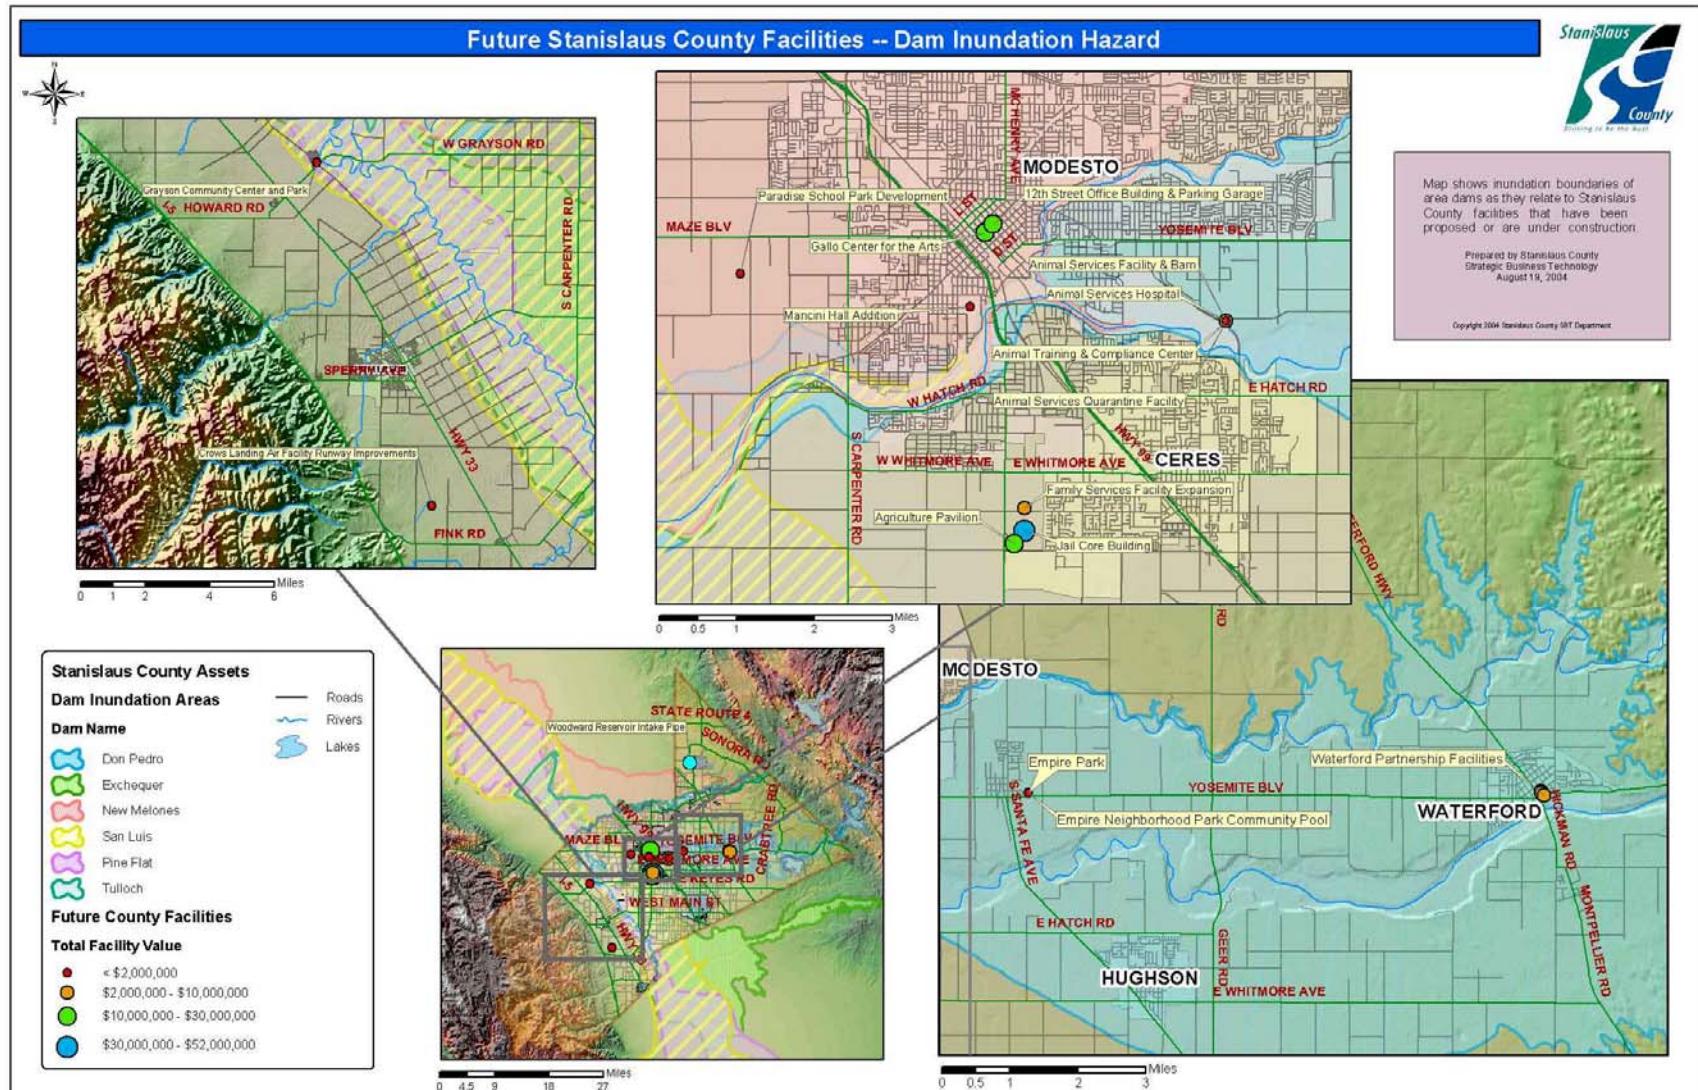

Exhibit I-4
Future Stanislaus County Facilities -- Dan Inundation Hazard

ASSESS DAM FAILURE VULNERABILITY/ANALYZING DEVELOPMENT TRENDS

Growth continues to occur within the valley floor adjacent to the existing incorporated cities, with few exceptions. The risks of inundation resulting from failure of a dam pose a threat to the entire valley floor and, in particular, from New Melones and Don Pedro dams within the area of greatest population density. In the western side of the valley and along the San Joaquin River, inundation caused by the failure of San Luis Dam and Exchequer Dam predominantly threaten the Newman, Patterson and Grayson communities.

The Stanislaus County Board of Supervisors has maintained support for the preservation of agricultural resources and has directed new development to the sphere of influence of existing incorporated communities. This policy has minimized "leap frog" development and the resulting conflict with agricultural uses throughout Stanislaus County. The Board has also encouraged the development of "infill" areas within existing communities as a priority over expansion into existing agricultural lands.

In Stanislaus County, the vast majority of developable lands lies within areas potentially subject to inundation due to dam failure. Inundation from dam failure in Stanislaus County could potentially be catastrophic given the potentially widespread area affected; however, such an event would be an extraordinary occurrence with little probability.

MULTI-JURISDICTIONAL DAM FAILURE RISK ASSESSMENT

See Volumes Two and Three for dam failure risk assessments from the County's multi-jurisdictional partners.

PROFILE—FLOOD EVENTS

Flooding has been a major problem throughout the history of Stanislaus County, particularly with the encroachment of urban growth into flood planes. Major floods have occurred in 1861, 1938, 1950, 1955, 1969, 1983, 1995, 1997 and 1998. The State Reclamation Board has identified and adopted designated floodways, defined in feet per second of flow, along the San Joaquin River, Stanislaus River, Tuolumne River and portions of Dry Creek.

The Department of Housing and Urban Development (HUD) has also developed flood hazard zones, which are referenced in the County's Flood Control Ordinance and used for insurance purposes. Any non-agricultural encroachment into these areas requires special permits that are difficult to obtain and often costly to implement. Permits for encroachment into the designated floodways must be obtained from the Reclamation Board. The County administers other permits. These measures still do not control flood hazards for existing development. Information regarding flood-prone areas as shown on the HUD maps is available in the Department of Public Works.

Substantial action has taken place to reduce flood hazards. Construction of Don Pedro Dam on the Tuolumne River and New Melones Dam on the Stanislaus River have permitted officials to monitor the flows of water in those rivers, significantly reducing the chances of flooding. New Melones Dam has, since its completion, prevented flooding above the 8000 cubic feet per second (cfs) level on the Stanislaus River. Regulation of the flows from Don Pedro limits flooding along the Tuolumne River, but does not completely eliminate it.

Several attempts have been made along the San Joaquin River to control flooding. First, the Corps of Engineers has built levees to limit flooding. Nine Reclamation Districts maintain these levees. Since these levees do not extend the full length of the river, flooding still occurs.

Second, there is a statewide flood control program, which monitors, through the use of computers, the levels of various rivers in the State. If the operator at Don Pedro, for example, wants to release water, the release might not cause any flooding on the Tuolumne but might affect the San Joaquin River. The operator informs the State of his intentions. The State then feeds this information into its computer along with all other available data to determine the effect of the proposed release. The State then coordinates the release of water from all of the dams so there is as little impact as possible on the rivers downstream. In the case of Don Pedro, it would be the San Joaquin River. Don Pedro may be permitted to release its water while another dam elsewhere along the system may have to temporarily reduce its releases.

Presently, there are two flood control districts in the County, the Orestimba Flood Control District and Sand Creek Flood Control District (Denair). There is some discussion of forming a flood control district for Salado Creek (Patterson) although no specific boundary is yet proposed.

Stanislaus County Flood of 1997

ASSESS FLOOD VULNERABILITY/OVERVIEW

The primary flood control concerns for Stanislaus County are the controlled or uncontrolled releases from the New Melones Dam onto the Stanislaus River, Don Pedro Dam onto the Tuolumne River and flood conditions on the San Joaquin River. Additionally, flood conditions can and have developed along the tributary known as Dry Creek, which originates in the watershed of the eastern Stanislaus foothills and terminates where it flows into the Tuolumne River in Modesto.

Most flood conditions are from heavy, prolonged rain or rapid snow thaw. Flooding could involve extensive life and property loss, interruption of transportation and communications systems, loss and damage to agricultural land, and interruption of government infrastructure.

Flooding risks are present along several rivers, including Del Puerto Canyon, Dry Creek, Orestimba Creek, Salado Creek, San Joaquin River, Stanislaus River, and the Tuolumne River. Exhibit F-1 illustrates the 100-year and 500-year flood zones within Stanislaus County.

ASSESS FLOOD VULNERABILITY/IDENTIFYING STRUCTURES

Facilities potentially affected by extensive flooding are:

- Airport
- Schools
- Utilities
- Emergency Services
- Agriculture
- Sanitation
- Residential

ASSESS FLOOD VULNERABILITY/ESTIMATING POTENTIAL LOSSES

Exhibits F-2 and F-3 identify County occupied facilities with flood risks from each of these sources.

Exhibit F-4 identifies future planned County occupied facilities and flood risks based on projects included in the Preliminary Capital Improvement Plan for Fiscal Year 2003-2005, where such planned facilities have been sited. Other projects planned with the CIP are not included where the site of the proposed facility has not yet been identified. Siting of all new County occupied facilities will consider the risks from local hazards.

Exhibit F-1
Stanislaus County Flood Hazards

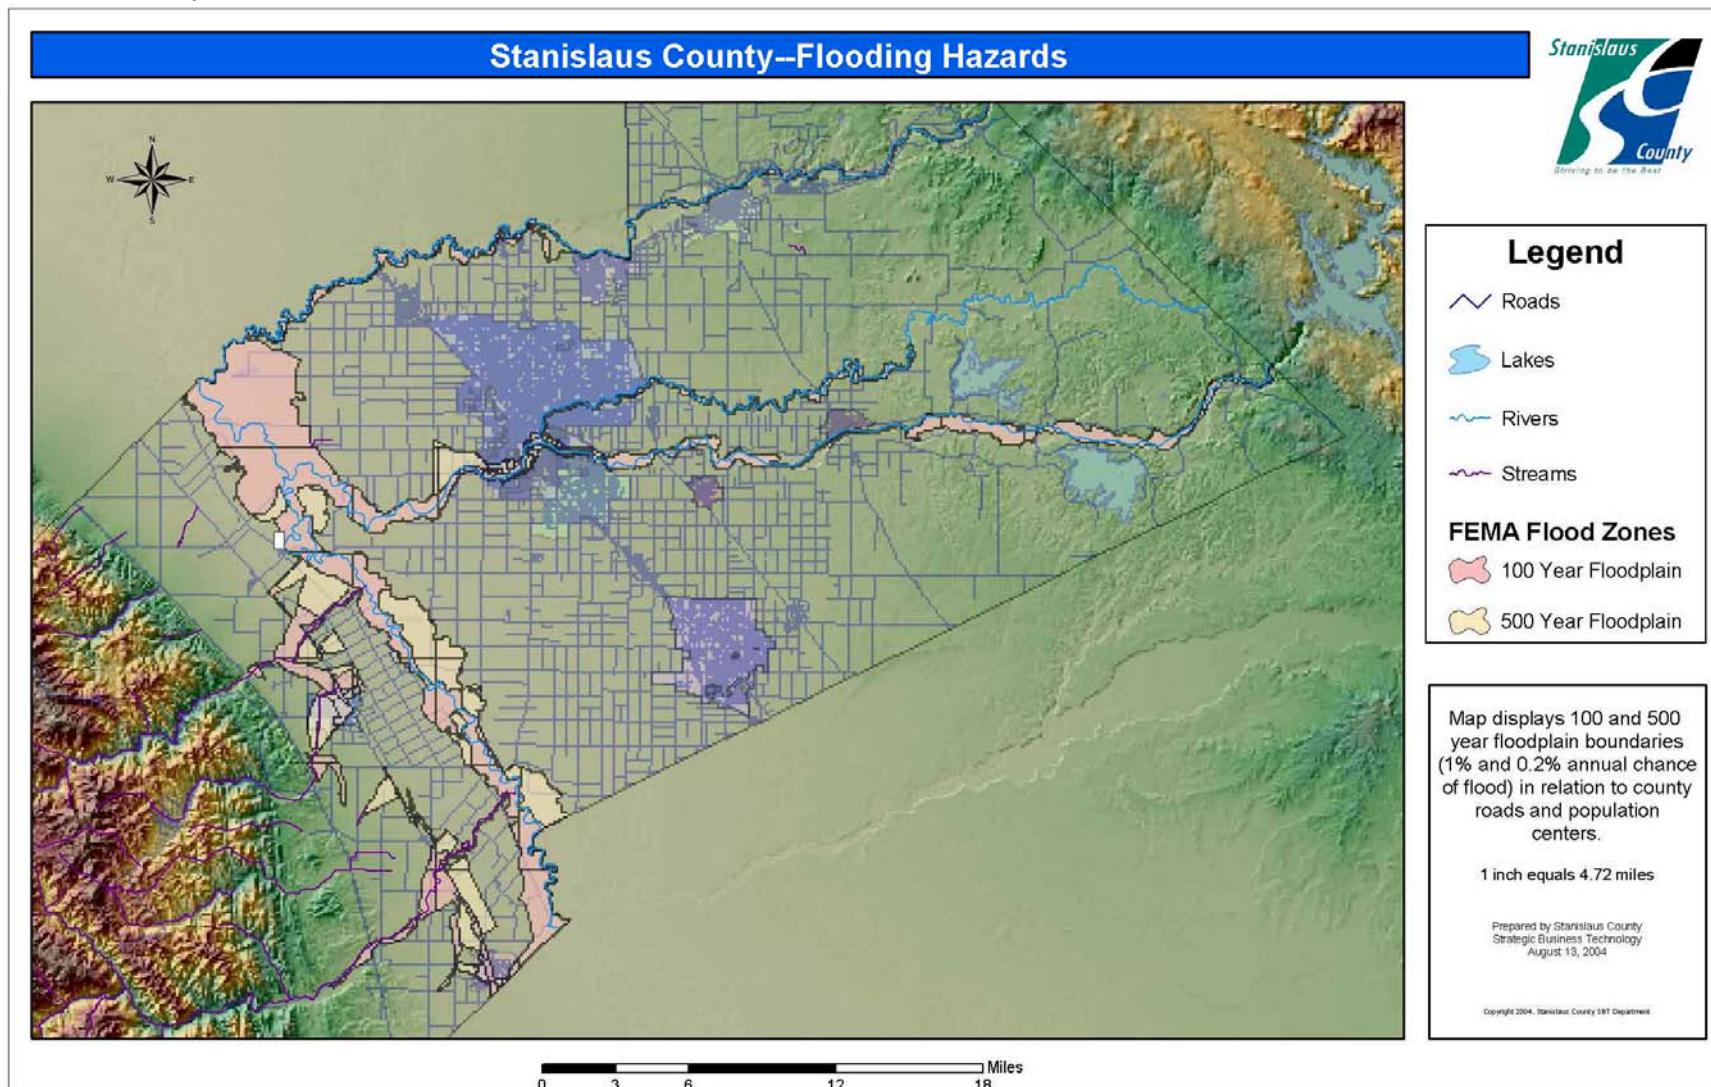

Exhibit F-2

South Stanislaus County Occupied Facilities and Flood Risks

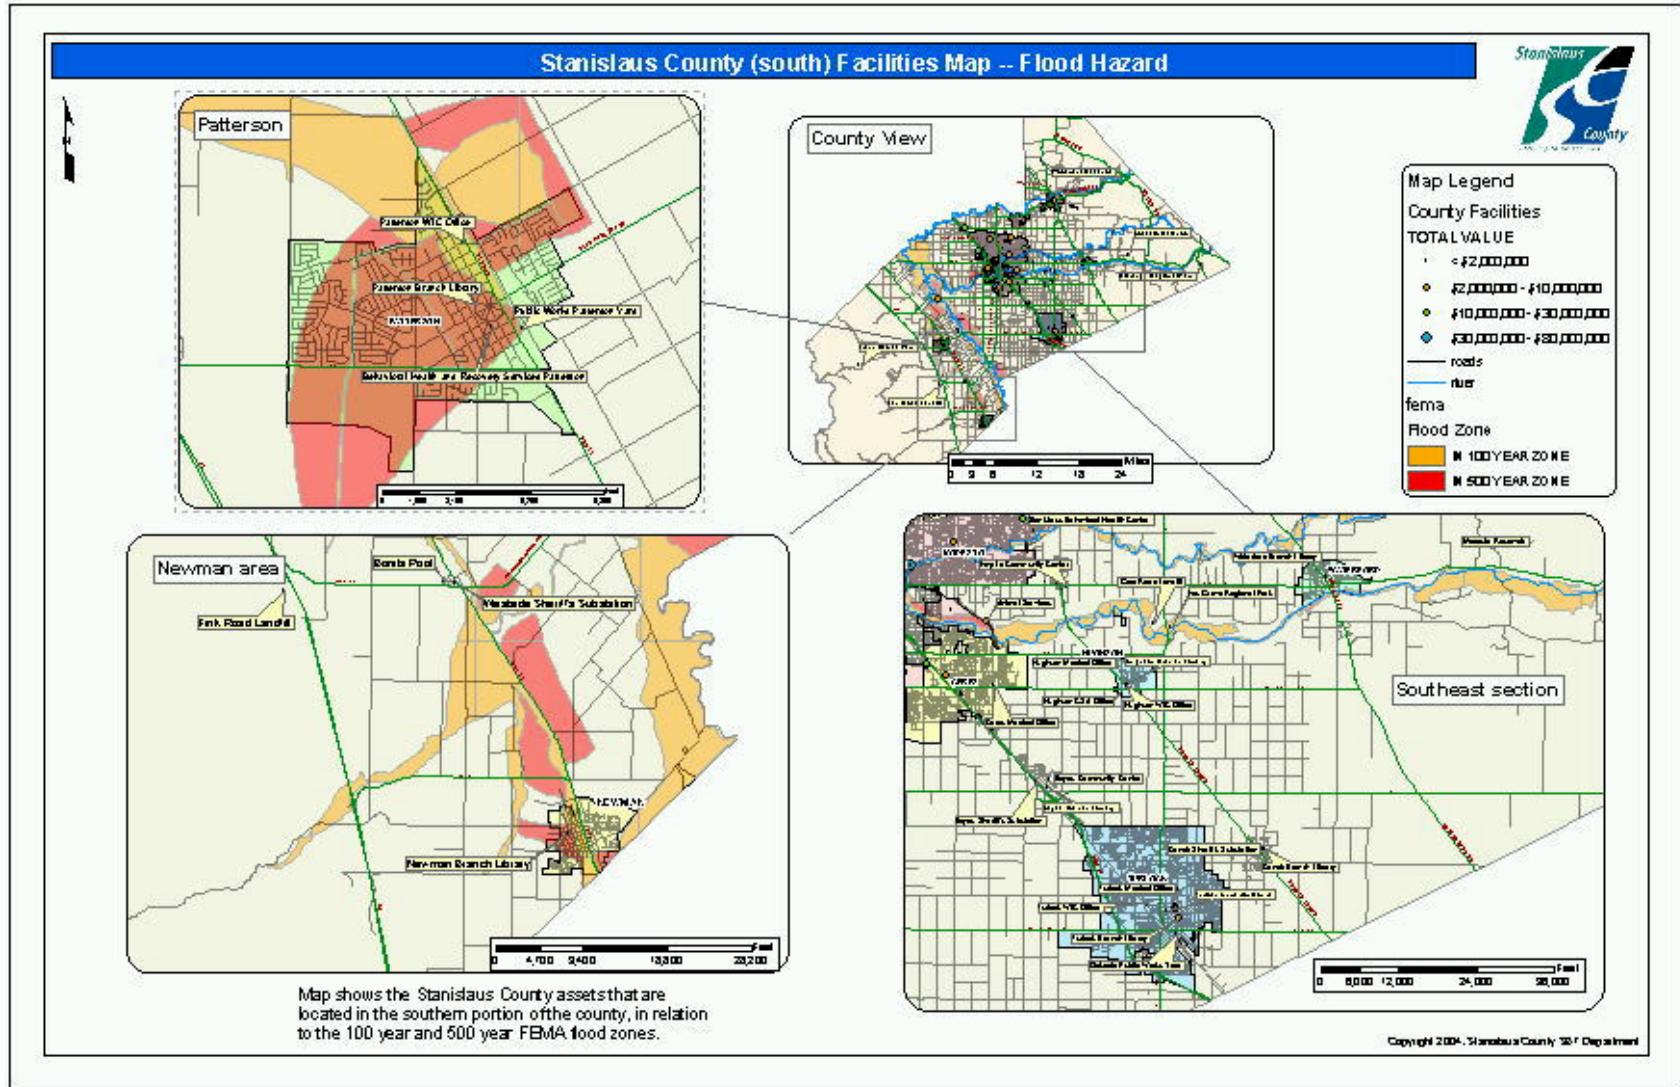

Exhibit F-4
Future Facilities at Flood Risk

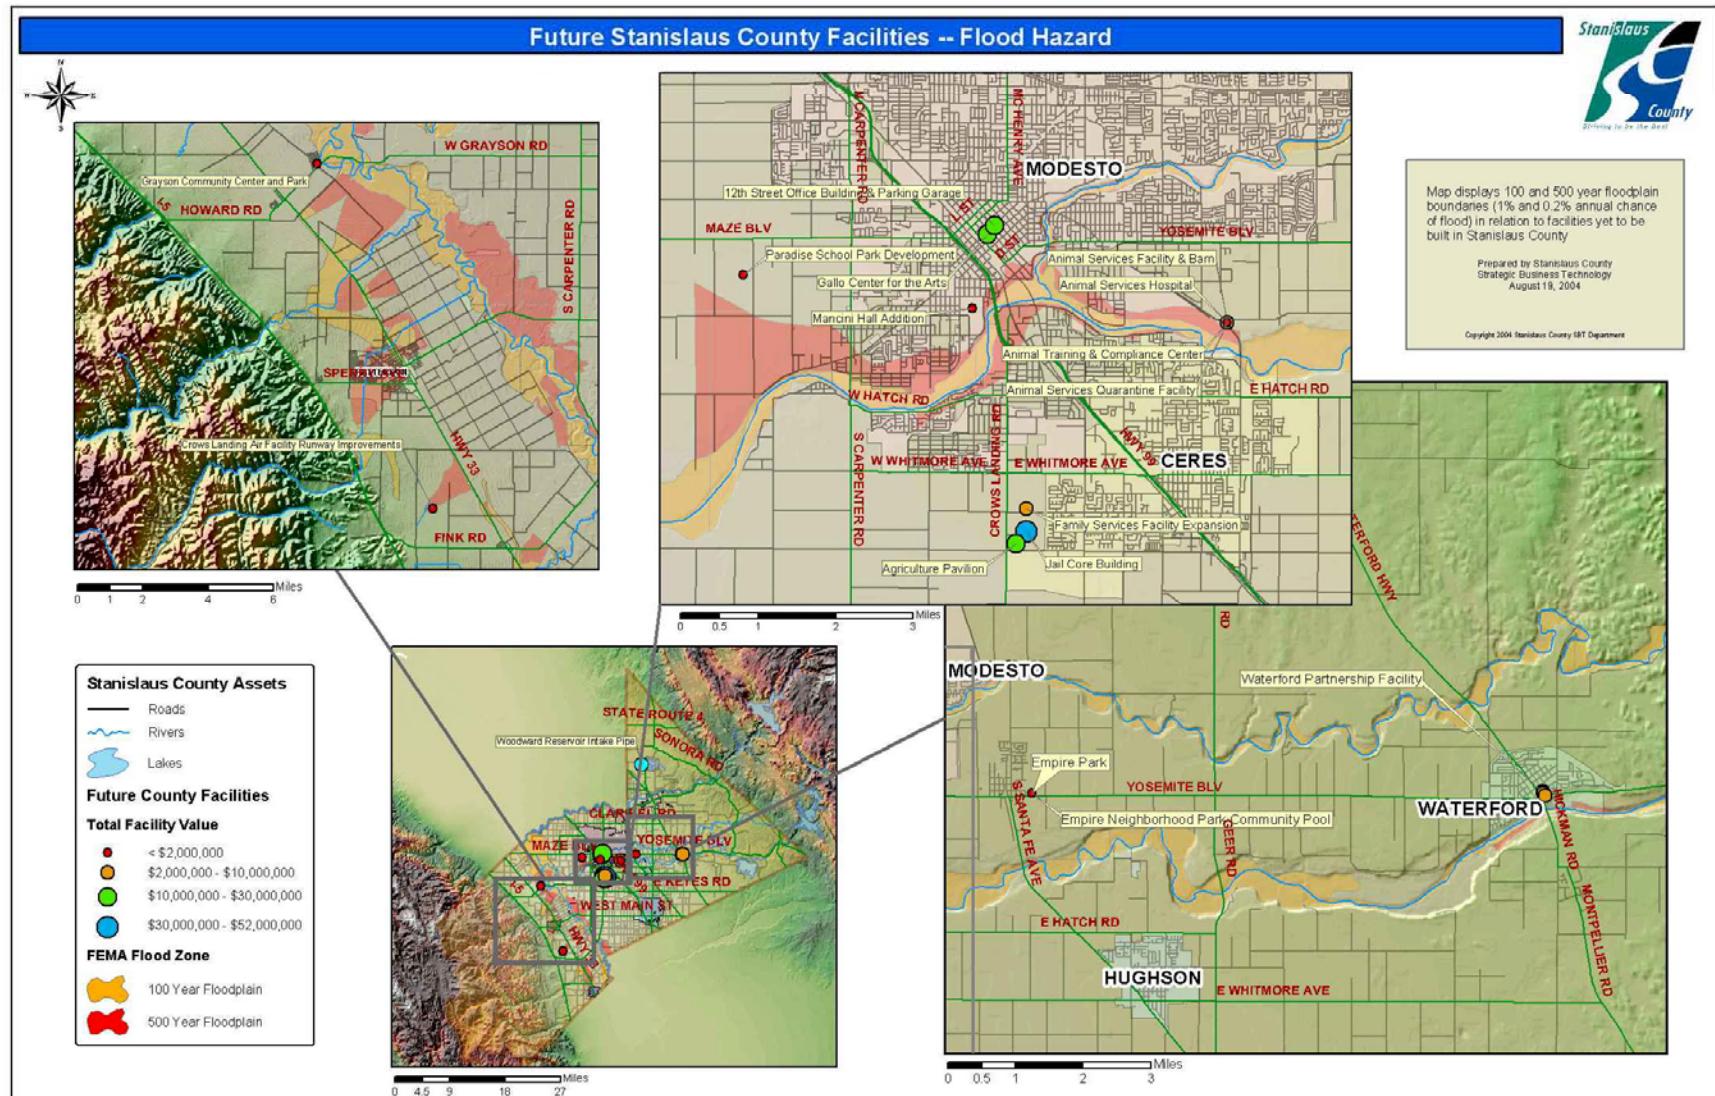

Exhibit F-5 lists a summary of the population, properties and values at risk from 100-year and 500-year floods from various source rivers. This exhibit also lists a summary of the housing units, population, number of parcels and valuation of properties at risk of flooding from various rivers within unincorporated Stanislaus County.

Exhibit F-5
Summary of Flood Risks in Stanislaus County

River	Population See Appendix B	Housing Units	Nbr. Parcels	Total Value
100-Year Flood				
Del Puerto Canyon	332	99	161	\$41,272,399
Dry Creek	747	273	162	\$50,722,172
Orestimba Creek	588	219	214	\$50,328,934
Salado Creek	20	6	21	\$7,085,611
San Joaquin River	1,527	411	451	\$80,755,343
Stanislaus River	2,419	946	446	\$137,354,056
Tuolumne River	2,890	1,066	2,160	\$795,166,379
500-Year Flood (Includes 100-Year and 500-Year Risk)				
Del Puerto Canyon	625	194	218	\$55,329,267
Dry Creek	747	273	162	\$50,722,172
Orestimba Creek	1,056	385	317	\$69,439,991
Salado Creek	97	25	38	\$10,507,181
San Joaquin River	1,916	529	516	\$104,572,045
Stanislaus River	2,419	946	446	\$137,354,056
Tuolumne River	9,680	3,110	3,328	\$928,533,251

Values for 500-Year Flood impacts are in addition to the 100-Year flood values in the table above and in Appendix B. The values shown for 500-year flood impacts represent the difference between the 100-year flood level and the 500-year flood level. Add both values to represent the estimated 500-year flood impact.

Refer to Appendix B for detailed identification of land uses, values and parcel counts by land use type, jurisdiction and flood source. Appendix B provides a summary of the number of housing units and population by jurisdiction and flood source.

ASSESS FLOOD VULNERABILITY/ANALYZING DEVELOPMENT TRENDS

Urban development is discouraged in areas with growth-limiting factors such as a high water table, poor soil percolation and flood plains unless measures to mitigate the problems are included as part of the development application.

Development is not allowed in areas that are within the designated floodway. Development within the 100-year flood boundary shall meet the requirements of Chapter 16.40 Flood Damage

Protection of the County Code and within the designated floodway shall obtain Reclamation Board approval.

With several rivers traversing the County, flooding is a concern. The County makes information available to landowners in areas subject to flooding and supports the formation of improvement districts including flood control districts to eliminate safety hazards.

Development, except that which is consistent with the County General Plan at the time the Patterson Agreement is executed, in the area known as the Sperry Avenue Corridor, shall be required to participate in the solution of the Salado Creek flooding problem.

The County also utilizes the California Environmental Quality Act (CEQA) process to ensure that development does not occur that would be especially susceptible to flooding. Most discretionary projects require review for compliance with CEQA. As part of this review, potential impacts must be identified and mitigated.

The County continues to support the Federal Emergency Management Agency (FEMA) Flood Insurance Program so that residents who qualify may purchase such protection.

MULTI-JURISDICTIONAL FLOOD RISK ASSESSMENT

STANISLAUS COUNTY
MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN
RISK ASSESSMENT

IDENTIFY—WILDFIRE HAZARD

NATURAL HAZARD	HOW IDENTIFIED	WHY IDENTIFIED
WILDFIRE	<ul style="list-style-type: none">• County General Plan Safety Element• County Emergency Operations Plan	<ul style="list-style-type: none">• Potential to cause devastation.

PROFILE—WILDFIRE

Generally from May to October of each year, Stanislaus County experiences its wildfire season. Most of the fire susceptible areas are located in the extreme eastern and western portion of the County. This is due to the underdeveloped, rugged terrain and the highly flammable, grass and brush covered land. High temperatures, low humidity, and strong winds may exacerbate the potential for wildland fires.

Within Stanislaus County, the areas of potential brush fires are the Diablo Range, generally located west of Interstate 5, and the Sierra Nevada foothills in the eastern portions of the County. According to the California State Division of Forestry, the majority of these areas are rated as having the highest possible critical fire weather frequency on an annual basis. This factor, combined with vegetation and slope percentage, produce overall fire ratings of moderate to high throughout the fire hazardous areas.

The urban areas of Stanislaus County are not normally susceptible to wildfires, however, there is still potential for smaller fires in and around the less developed areas where patches of vegetation are present.

Brush fire hazards can be traced to four causes: topography, vegetation, climate, and people. Chaparral, grasslands and other wild plant life provide the major sources of fire fuel. Stanislaus County has a Mediterranean type of climate with cool, wet winters and hot, dry summers. The hot, dry summers in Stanislaus County produce large areas of extremely dry vegetation often located on topography which enhance the spread of flames and prohibits access of fire fighting equipment. When people are added to the above situation, the chances of fires are greatly increased.

Brush fires have a secondary effect on erosion, which can occur due to loss of vegetation. This erosion effects not only the burned land, but also land below it where eroded material may be deposited. It should be noted that some wildland fires are necessary as an integral part of the ecosystem and are allowed to burn even after a fire suppression agency is capable of control. These areas are limited, however, and not permitted to endanger life or property.

Westley Tire Fire

ASSESS WILDFIRE VULNERABILITY/OVERVIEW

Wildland fires are generally limited to the foothills on either side of the County. Although there is less of a hazard to structures and people, controlling such fires is more difficult because of their inaccessibility. While urban fires result in injuries and loss of property, brush fires may result in loss of natural vegetation, loss of agricultural crops, erosion of the soil, and intrusion of the eroded soil into lower lying areas where it may be deposited.

Urban fires are generally man-caused fires that can be mitigated through proper building code requirements, fire flow minimums and zoning or subdivision ordinance requirements. Although the County has no single unified set of safety standards, there are a number of standards, specifications, and regulations, which apply to fire safety. These include Building Code Standards, zoning, and subdivision regulations that specify building material quality, setbacks, relationships between land uses, land use density, and preservation of open space lands. The major impact of these standards has been directed towards current and future development. They do little to alleviate urban fire problems in older areas. The social and economic ramifications of attempting to mitigate the potential threat of fire hazardous structures are great. Vulnerability to wildfires is increased because much of the land area of the County is serviced by Volunteer Fire Departments and a portion of the County north of Woodward Reservoir is not covered by any fire district.

The County has developed several mechanisms for dealing with fire hazards. Building Code Standards require use of the safest electrical methods and separation between buildings for fire reasons. When separations are not maintained, walls must be built (commonly called fire walls), through which fire cannot burn for a specified time, usually one to four hours. This helps prevent the spread of urban fires. Some buildings whose use would be more susceptible to fire must have automatic sprinkler systems installed. Numerous other safety measures can be found in the Building Code.

The County Fire Warden's Office enforces a section of the County Code which requires removal of "all dirt, rubbish, weeds, ... which constitute a fire menace or which is otherwise a menace to health or safety..." in urban areas. If the property owner does not remove the material, the Fire Warden's Office can do so and charge the cost of removal to the property owner.

The map in Exhibit W-1 indicates distances from regions where wildfires have historically occurred, suggesting the degree of likelihood of future fire threats.

ASSESS WILDFIRE VULNERABILITY/IDENTIFYING STRUCTURES

The majority of areas threatened by potential wildfire losses within Stanislaus County are in the foothills at the far eastern and western edges of Stanislaus County where little population or development presently exist. Exceptions include:

- Pockets of development west of Interstate 5 (Diablo Grande; Fink Road Landfill)
- Frank Raines Regional Park (restrooms, well/pump facilities)
- Radio communications facilities (Mt. Oso)
- Woodward, Turlock Lake and Modesto Reservoir park improvements
- La Grange Regional Park improvements

Wildfires can threaten any improvements, particularly those which are not protected by buffer zones or which are constructed of combustible materials. The highest risk areas are also those with the least density of development, but may include ranches, farmland and pasture properties and their associated structures and fences. Most of the County's infrastructure facilities are less vulnerable to wildfire due to the materials used in their construction. Wildfires may threaten infrastructure of other utilities, such as power and telecommunications lines, etc.

ASSESS WILDFIRE VULNERABILITY/ESTIMATING POTENTIAL LOSSES

Exhibits W-1 through W-4 identify lands within Stanislaus County at various levels of risk for wildfires.

Exhibit W-2 identifies existing County occupied facilities and wildfire risks within the eastern portion of Stanislaus County. Exhibit W-3 provides similar detail for the southern and western portions of the county. Planned future County occupied facilities are identified in Exhibit W-4 where the site of planned facilities is known. Those facilities to be sited in the future will consider mitigation of local hazard risks. The highest risk areas are located in the west hills and in the Sierra Nevada foothills at the eastern edge of the County.

Exhibit W-1
Stanislaus County Wildfire Risk-Hazard

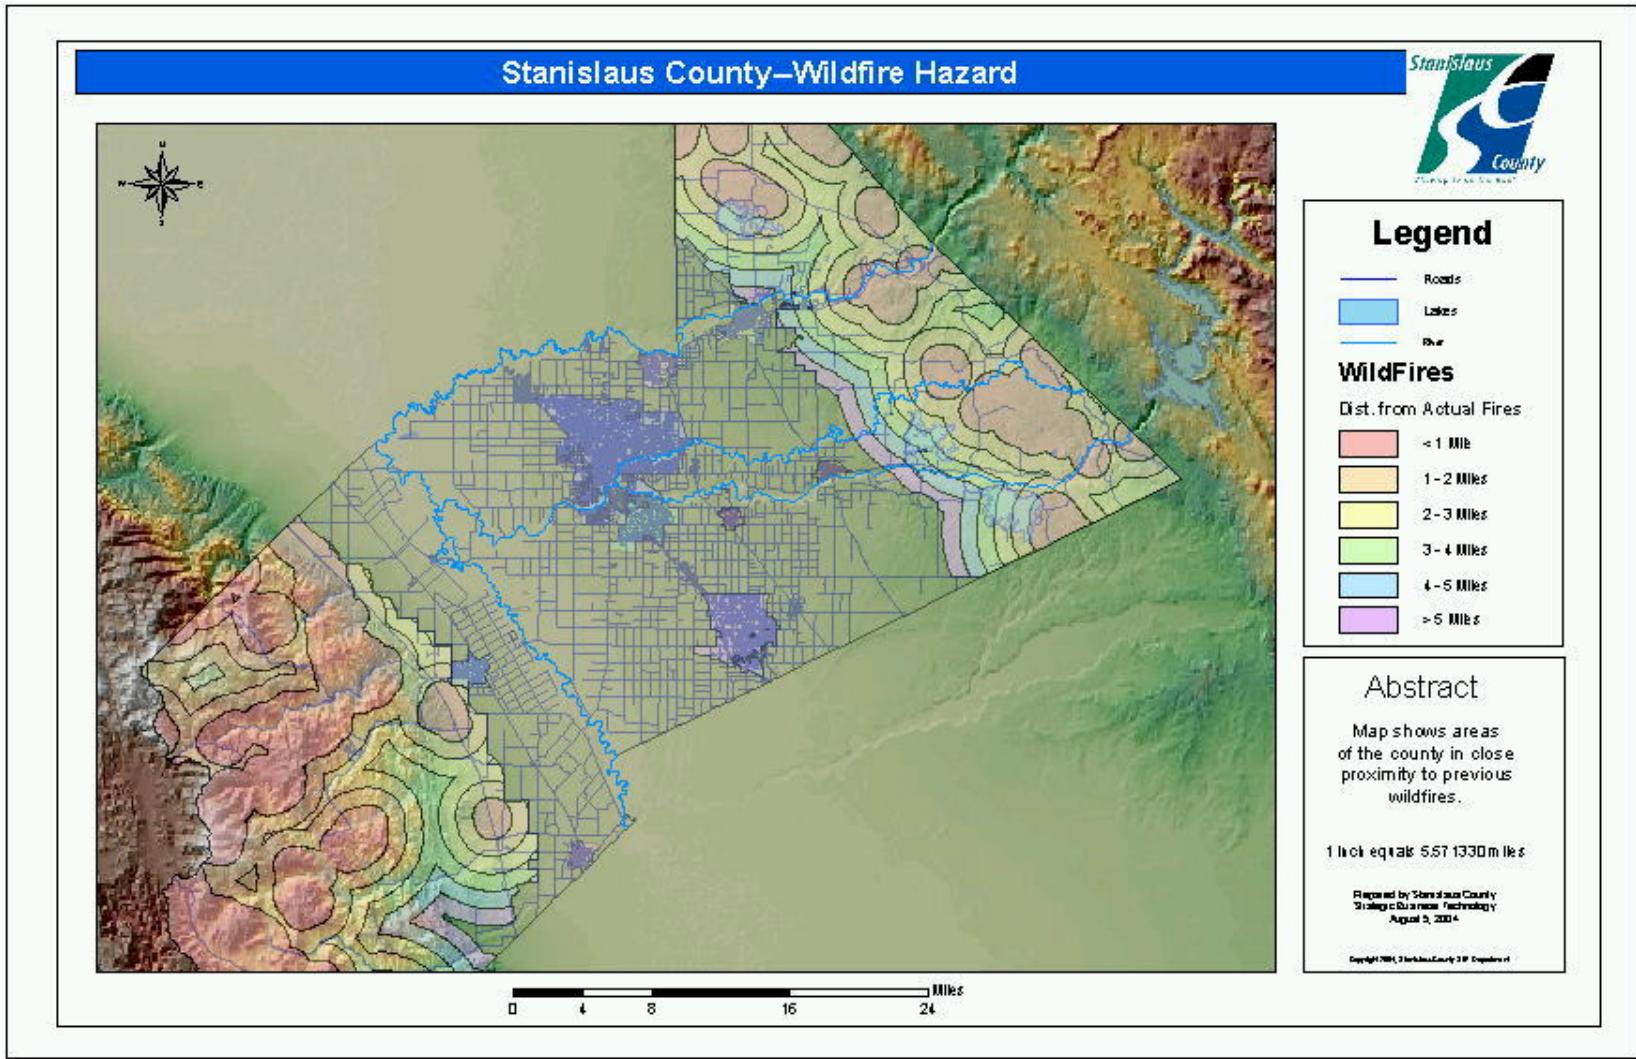

Exhibit W-2
Stanislaus County (East) Facilities Map -- Wildfire Hazard

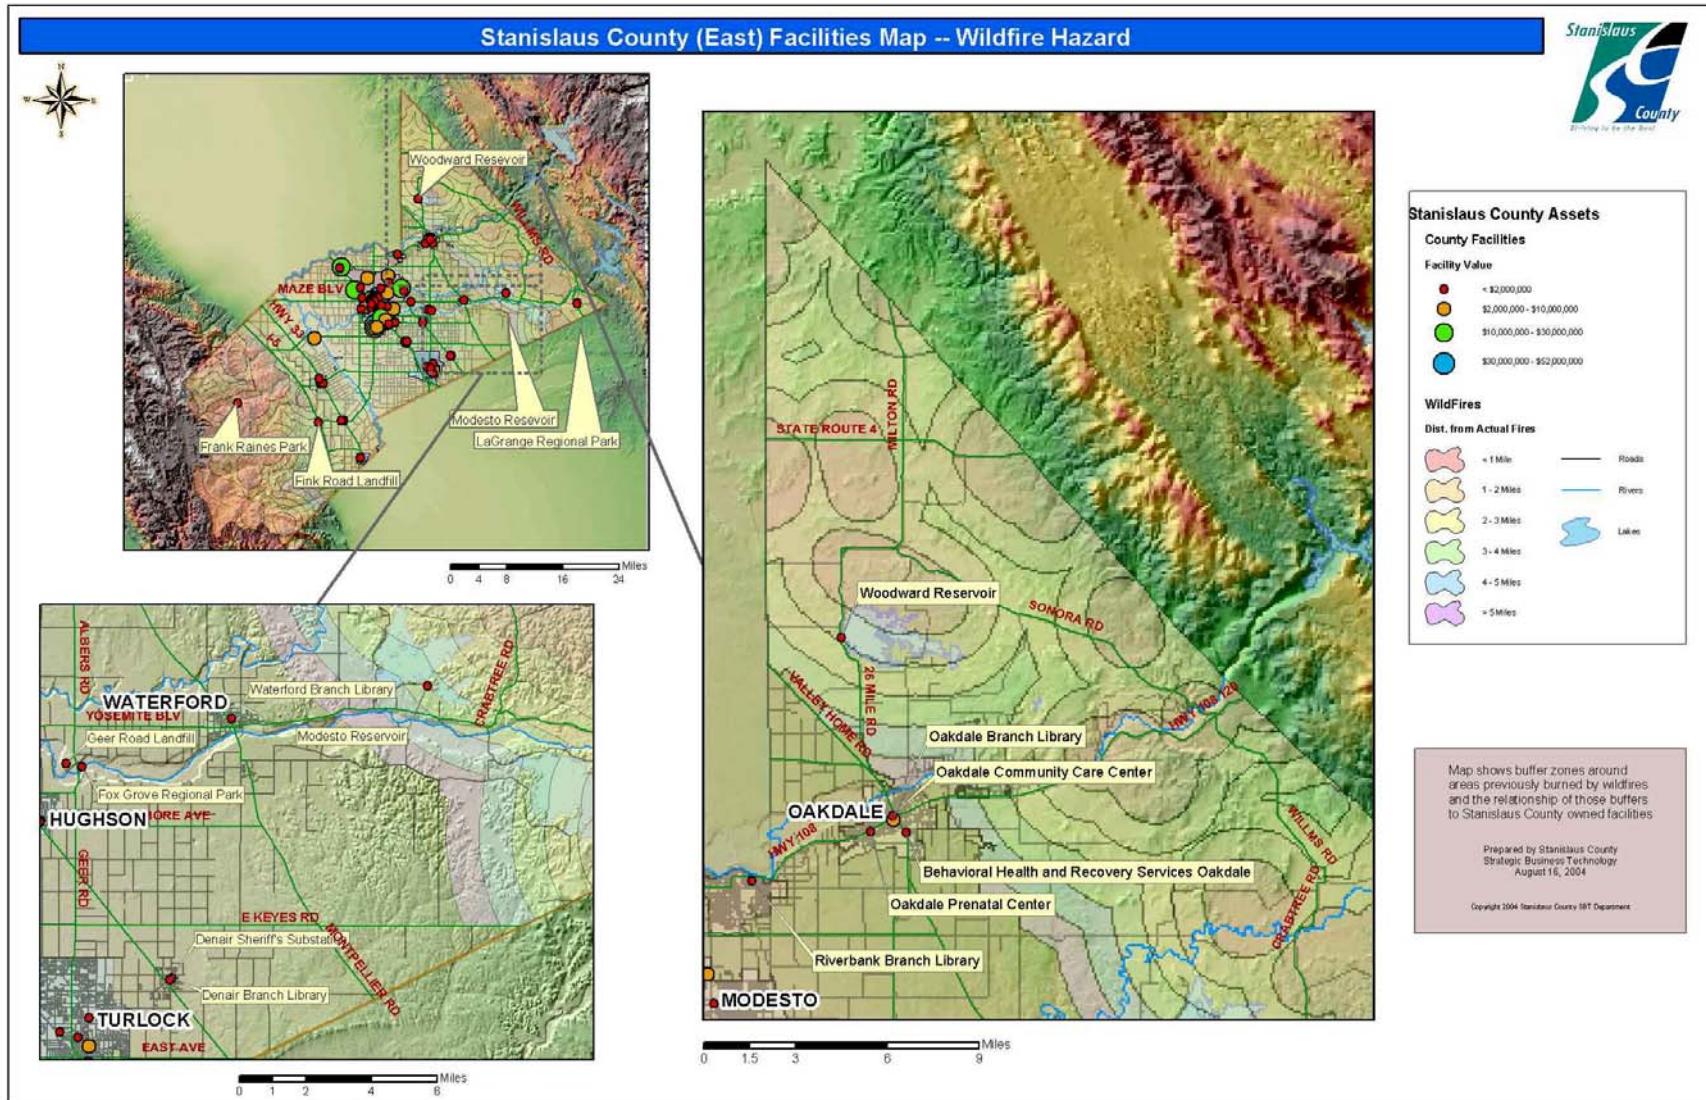

Exhibit W-3

Stanislaus County (South) Facilities Map -- Wildfire Hazard

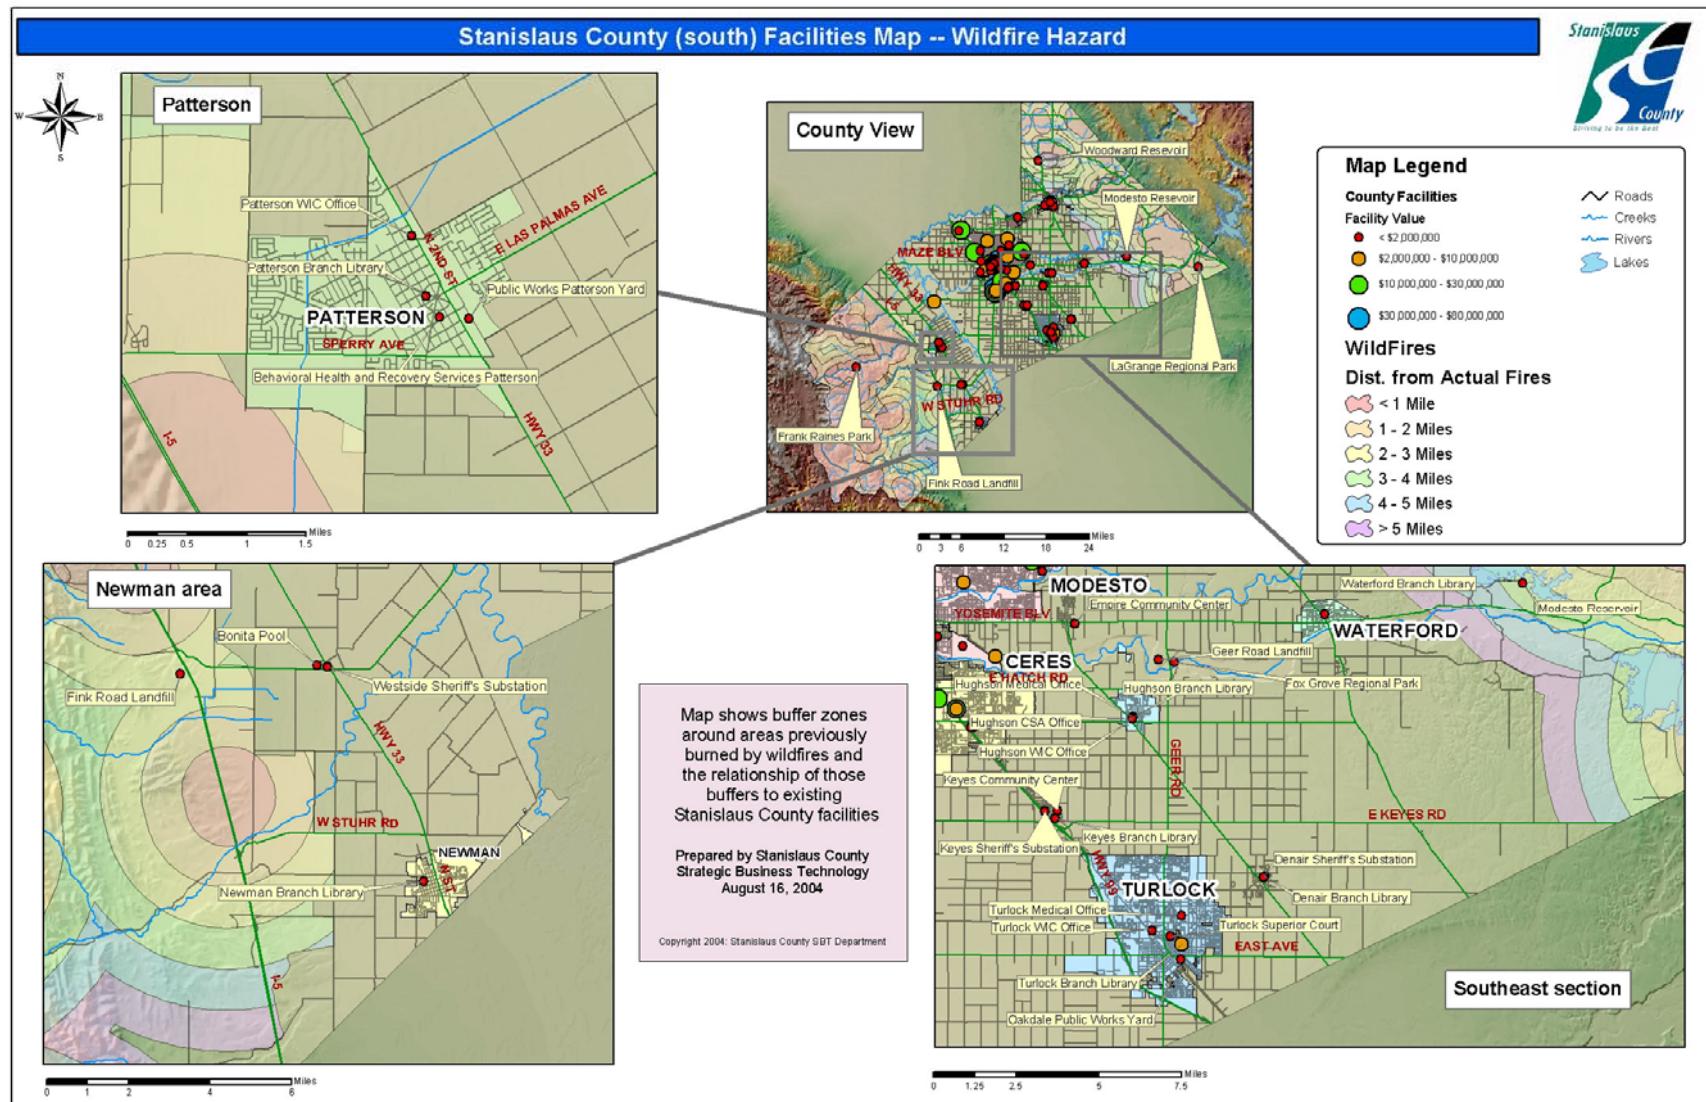

Exhibit W-4
Future Stanislaus County Facilities -- Wildfire Hazard

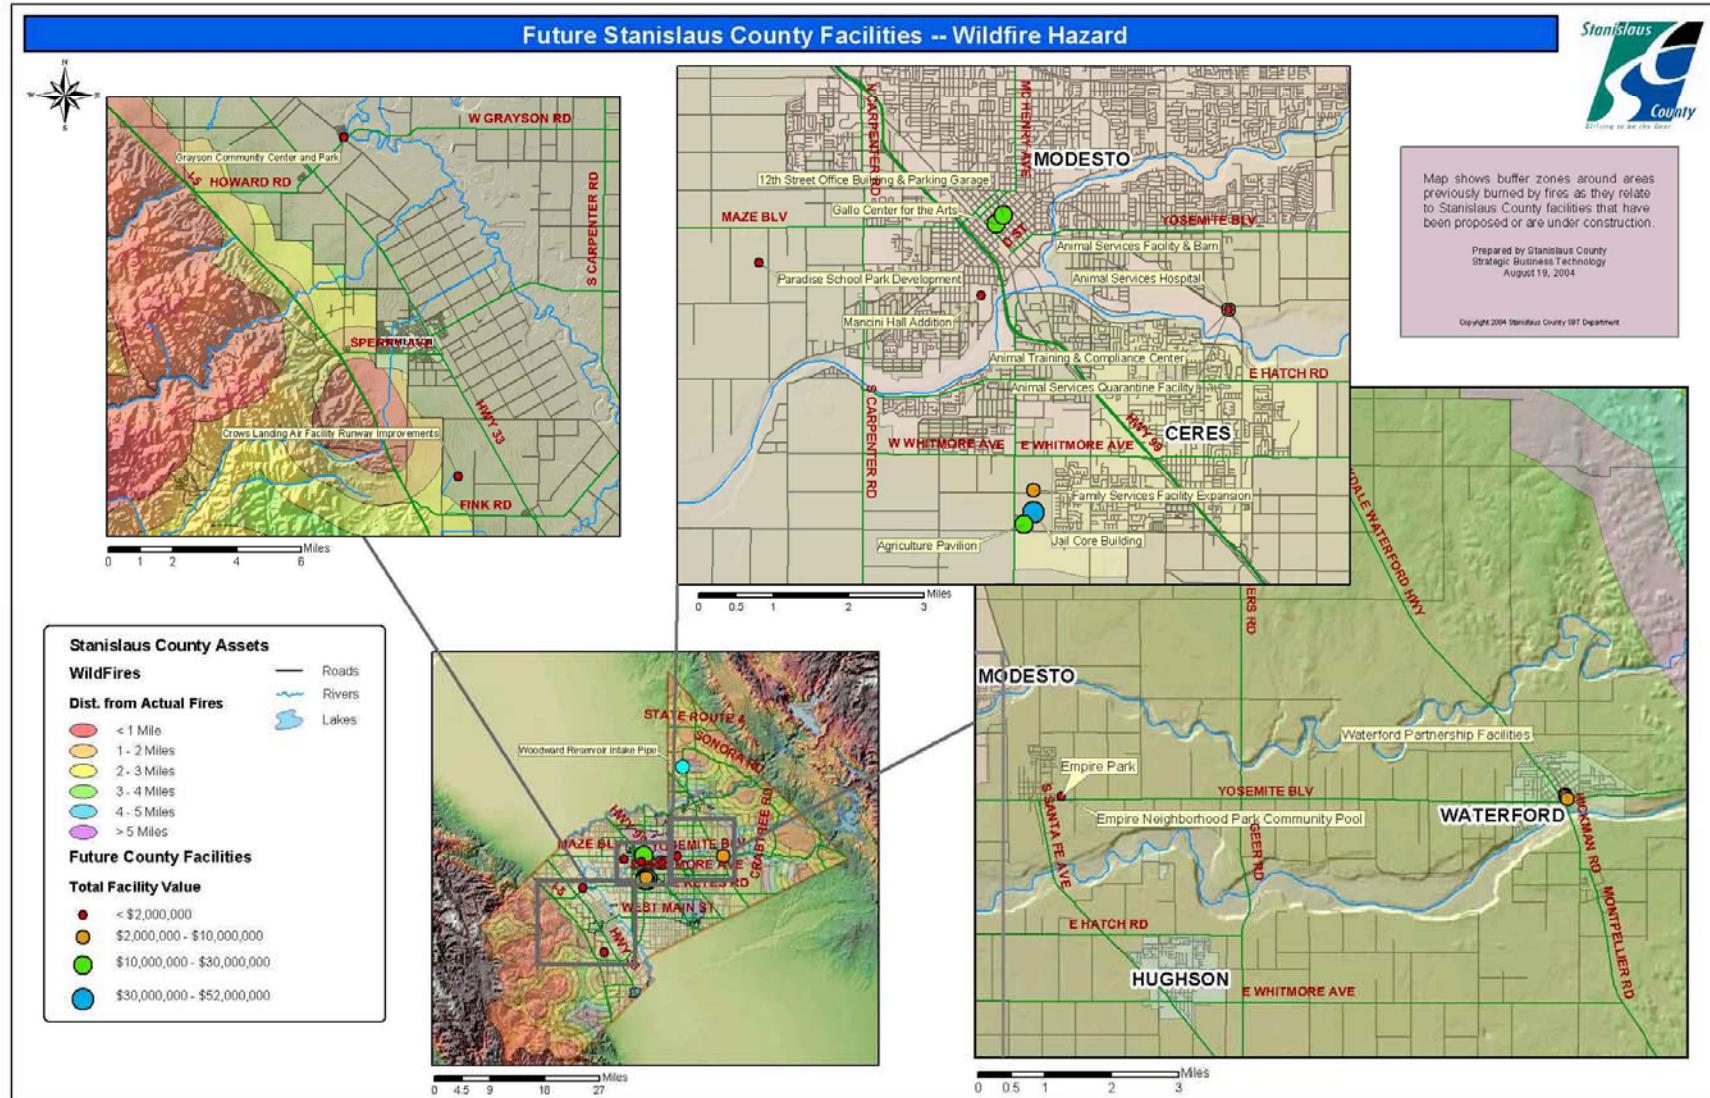

Exhibit W-5 provides a summary of properties and values within those areas at wildfire risk. The summary provides the total value of all properties; however, it is unlikely that all properties would experience a hazard event simultaneously.

Exhibit W-5

Summary of Properties at Wildfire Risk in Stanislaus County

Number of Parcels, Total Value, Population and Housing, 2004

Land Use	Nbr. of Parcels	Total Value
Commercial	60	\$44,282,998
Industrial	6	\$1,639,227
Non-Assessable, Factored	376	\$68,743,843
Residential	423	\$136,193,283
Residential-Income	4	\$1,232,885
Rural, Farm, Agricult.	3,514	\$760,031,240
Vacant Comm./Industrl.	33	\$5,250,267
<u>Vacant Residential</u>	<u>60</u>	<u>\$5,126,989</u>
Total	4,476	\$1,022,500,732
Population		5,497
Number of Housing Units		2,039

A detailed table of values for properties located within wildfire risk areas by jurisdiction is located in the Appendix J.

Interactive Resources

Stanislaus County has developed layers within a geographic information system (GIS) to map the wildfire risk areas, property land uses and values, housing and population as presented in this section. The GIS system provides the capability to quickly identify specific uses and values of properties at risk during an actual event where a specific geographical area can be identified. Areas at risk and potentially at risk due to wind patterns, etc. can be quickly identified.

ASSESS WILDFIRE VULNERABILITY/ANALYZING DEVELOPMENT TRENDS

The Fire Warden's Office has developed minimum fire flow requirements for new development. The General Plan lists the requirements in existence as of April 1, 1986. The requirements are:

Minimum Fire Flow Requirements. Fire flow shall be determined in accordance with the fire protection agency of the area and the design engineer shall check with the involved agency prior to design.

Existing Water Systems. Where an established water system is present which may be extended, and where the system is not substandard to these regulations, the fire flow shall not be less than:

Lot density of three or more single family residential units per acre.	1,000 gpm
Duplex residential units, neighborhood business of one story.	1,500 gpm
Multiple residential, one and two stories; light commercial or light industrial.	2,000 gpm
Multiple residential, three stories or higher; heavy commercial or heavy industrial.	2,500 gpm

Exception: With the installation of an approved, supervised, automatic sprinkler system, in accordance with the National Fire Protection Association Pamphlet #13, throughout the building, a 50% reduction may be granted. In no case shall there be less than 500 gpm provided on site.

No Existing Water System. Where there is no established water system, in the rural areas of Stanislaus County, the following guidelines shall apply:

The installation of reservoirs, pressure tanks, elevator tanks, or other fixed systems capable of supplying the required fire flow and/or static source shall be in accordance with the National Fire Protection Association Pamphlet #1231, "Water Supplies for Rural and Suburban Fire Fighting."

The Land Use Element of the County General Plan requires that urban development occur through logical expansion of existing urban areas so that urban services (such as fire protection, public water, etc.), can be provided. One reason for this requirement is that provision of public water reduces the effects of urban fires. The Circulation Element proposes road widths and standards that will provide adequate access for fire fighting equipment.

The Zoning Ordinance and Subdivision Ordinance also contains standards to minimize fire hazards. Among these provisions are minimum setbacks between dwellings and between buildings and streets, as well as a prohibition on the creation of parcels without adequate access. The minimum width road, without special approval, is 50 feet.

The major impact of these measures has been directed towards current and future development. They do little to alleviate urban fire problems in older areas. The social and economic ramifications of attempting to mitigate the potential threat of fire hazardous structures are great. Issues to be faced include occupant safety and welfare, equitable treatment of building owners, possible relocation of occupants and minimization of overall adverse effects on the local economy. In the past, some of these issues could have been addressed through the use of Community Development Block Grant (CDBG) funds, however, it appears that those funds may

no longer be available. Both the Stanislaus County Building Department and the Department of Environmental Resources attempt to upgrade older buildings through the use of the Uniform Building Code, Uniform Housing Code, and health and safety laws. Both the legal authority and the available staff time is limited for this type of activity.

MULTI-JURISDICTIONAL WILDFIRE RISK ASSESSMENT

See Volumes Two and Three for risk assessments from the County's multi-jurisdictional partners.

STANISLAUS COUNTY MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN MITIGATION STRATEGY

INTRODUCTION

The Multi-Jurisdictional Hazard Mitigation Plan (MJHMP) represents the County's commitment to reduce risks from natural hazards. It will serve as a guide for the Board of Supervisors as they commit resources to reducing the effects of natural hazards. The County's Mitigation Strategy is guided by the vision of a safe and resilient County. Our mission is to integrate existing laws and programs into a mitigation strategy that will serve the citizens by reducing and preventing injury and damage from natural hazards. Our goals were developed to be compatible with the goals of the community as expressed in the Safety Element of the General Plan and the Emergency Operations Plan.

Stanislaus County routinely performs activities such as issuing building permits, approving development plans, and repairing roads. The County is conscious that these activities should reflect our vision and goals, whether it is using the most current building code, restricting development in hazard-prone areas, or making infrastructure decisions based on our latest Risk Assessment findings. This Mitigation Plan will help serve as a tool for making future decisions.

Mitigation efforts should occur both before and after emergencies or disasters. This includes eliminating or reducing the impact of hazards that exist within Stanislaus County.

Mitigation efforts include:

- Amending local ordinances and statutes, such as zoning ordinances, building codes, and other enforcement codes;
- Integrating mitigation efforts into the County General Plan;
- Initiating structural retrofitting measures;
- Improving the understanding of the vulnerability of building types;
- Ensuring that all development in high-risk areas is protected by mitigation measures that provide for safety;
- Assessing tax levees or abatements;
- Emphasizing public education and awareness;
- Assessing and altering land use planning; and/or
- Establishing partnerships between all levels of government and the business community to improve and implement methods to protect property and lives.

PLANNING PROCESS

The County's Mitigation Plan was a collaborative effort between the Project Manager, Capital Projects, Planning and Community Development Director, other planners, Public Works, the Fire Warden and the Office of Emergency Services retired Fire Warden. The plan was also reviewed and shared with our multi-jurisdictional partners to receive feedback and help us prioritize goals and objectives. A draft plan was also posted on the County's web page to encourage and solicit feedback from our stakeholders.

CRITERIA USED TO PRIORITIZE MITIGATION ACTIVITIES

- Percent of population at risk;
- Frequency and likelihood of hazard;
- Repetitive loss areas;
- Community planning resources available;
- Types and percent of land areas at risk;
- Development;
- Project urgency;
- Cost benefit analysis and/or;
- Cost effectiveness of measure.

WHY DO WE NEED A MITIGATION STRATEGY?

- To help the County make decisions that will reduce its vulnerability to hazards;
- It costs too much money to only address the effects of a disaster after it occurs;
- State and Federal aid is usually insufficient to cover the extent of physical and economic damages resulting from disasters;
- Damage from hazards can be prevented if the County takes the time to anticipate where and how disasters will occur, and then take appropriate action to minimize damages;
- The County can lessen the impact of disasters and speed the response and recovery process;
- The County has a moral responsibility to its citizens to plan and recognize the potential for hazards; and
- Awareness can help our community become more sustainable and disaster resistant.

FUNDING PRIORITIES

- Protect lives and property at risk from imminent hazards created or made worse by disasters;
- Protect vulnerable critical facilities and infrastructure in high hazard areas of the County;
- Reduce repetitive losses; and
- Encourage all communities to adopt a Local Hazard Mitigation Plan.

Funding projects that will help to mitigate imminent hazards are cost effective and assist in efforts to help communities recover from disasters. It is not anticipated that all future projects will be identified in this Multi-Jurisdictional Hazard Mitigation Plan. The County's Mitigation Plan will however, help guide local government to prioritize, be flexible, and identify critical mitigation strategy needs that may arise from a disaster when there is no time to update the local plan.

It is also important for the County to help protect critical facilities and infrastructure. Stanislaus County already has a Capital Improvement Plan with a Capital Projects Program in place. They are actively working to protect facilities and infrastructure important to the County. They are aware of the need to incorporate the requirements of the Mitigation Plan into their current and future projects.

Areas of repetitive loss are high priorities for mitigation funding. Repetitive losses can drain County coffers and are cost effective to mitigate.

Due to the past history of disasters declared throughout the County, we have strongly encouraged all jurisdictions to adopt a Local Hazard Mitigation Plan. Jurisdictions have been forewarned that without an adopted plan they cannot receive federal financial assistance for hazard mitigation.

STANISLAUS COUNTY
MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN
MITIGATION STRATEGY/EARTHQUAKES

HAZARD MITIGATION GOALS—EARTHQUAKES

- Minimize future loss of life and reduce property damage as a result of earthquakes.
- Reduce economic impact of earthquakes.

IDENTIFICATION AND ANALYSIS OF MITIGATION ACTIONS—EARTHQUAKES

PRIORITY ACTIONS		
HAZARD	ACTION	PRIORITY
Earthquake	Discourage development in geological fault areas.	HIGH
Earthquake	Prohibit urban development in geological fault and hazard areas unless measures to mitigate the problems are included as part of the application.	HIGH
Earthquake	All new development shall be designed to reduce safety and health hazards.	HIGH
Earthquake	The County will continue to enforce State-mandated structural Health and Safety Codes, including but not limited to the Uniform Building Code, the Uniform Housing Code, the Uniform Fire Code, the Uniform Plumbing Code, the National Electric Code and Title 24.	HIGH
Earthquake	Support efforts to identify and rehabilitate structures that are not earthquake resistant.	MEDIUM

IMPLEMENTATION OF MITIGATION ACTIONS—EARTHQUAKES

IMPLEMENTATION STRATEGY		
Action/Priority	Responsible Agency	Funding Source Timeframe and Deadline
Applications for development in areas with geological faults shall include measures to mitigate the impacts associated with ground shaking. (HIGH)	<ul style="list-style-type: none"> • Development Services • Public Works • Environmental Resources • Planning Department • Planning Commission • Board of Supervisors 	<ul style="list-style-type: none"> • Existing staff • Application Fees • General Fund • Continuous Implementation
Residential development may not be approved at the maximum density if it is in a geological fault area or if it does not meet the requirements of Chapter 16.40 of the County Code. MULTI-JURISDICTIONAL MITIGATION ACTIONS— WILDFIRE

See Volumes Two and Three for additional reports from the County’s Multi-Jurisdictional Partners. Each jurisdiction is responsible for pursuing actions and implementing strategies that are relevant to their particular jurisdiction.

STANISLAUS COUNTY
MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN
PLAN MAINTENANCE PROCESS

MAINTENANCE PROCESS

The County's Multi-Jurisdictional Hazard Mitigation Plan is a living document that will require adjustments to maintain its relevance. The Project Manager and Capital Projects will monitor, evaluate and update the plan to reflect ongoing efforts to improve hazard mitigation activities. The Project Manager will meet annually with the Planning Director to incorporate any appropriate changes or amendments in the General Plan into the maintenance review of the MJHMP.

The Geographical Information System used for the MJHMP will provide continuous updating of live information such as the Assessor valuation and land use data as properties are re-assessed and permits are pulled. This allows the MJHMP to be a current planning tool for both the development process and emergency management operations. The County property and facilities inventory used in the Risk Assessment will be reviewed annually by the Chief Executive Office. Any revisions deemed necessary will be added to the MJHMP and a copy of the written report will be provided to the State Office of Emergency Services (OES) and the Federal Emergency Management Agency (FEMA).

The County's Mitigation Plan will be updated every five years as required by the Disaster Mitigation Act of 2000. The State of California is required to update their plan every three years. The County will continue to work with its multi-jurisdictional partners when the plan is updated and we will seek input from the public regarding revisions to the current plan. Any updates to the MJHMP will be shared with our stakeholders during a Public Hearing.

The process to update the plan will be similar to the process used to develop the original plan, as outlined in the table below:

ACTION	WHEN	RESPONSIBILITY
1. Review and Update Hazard Risks	Spring 2010	Director of Emergency Services
2. Update Multi-Jurisdictional Partner List	Spring 2010	Chief Executive Office (CEO)
3. Risk Assessment Inventory	Summer 2010	Chief Executive Office/Capital Projects
4. Review Goals	Summer 2010	All Partner Jurisdictions
5. Review/Update Mitigation Strategies	Fall 2010	All Partner Jurisdictions
6. Publish Updated MJHMP Plan	Winter 2010	CEO & Partner Jurisdictions
Public Review/Comment/Input at Each Step		

It should be noted that the data contained within the inventory of risks is continuously updated in a "live" database linked to the Geographical Information System to provide up-to-date mapping and planning capabilities.

CRITERIA FOR REVISIONS TO THE MJHMP

- New technology;
- New information;
- Shifts in development;
- Areas affected by recent disasters; and/or
- Significant changes in Federal, State or County regulations, codes, ordinances or policies.

ADOPTION AND IMPLEMENTATION OF THE PLAN

On August 10, 2004, the Board of Supervisors authorized the County to develop and submit for review, the first three parts of the Multi-Jurisdictional Hazard Mitigation Plan to the State. The first three parts of the plan were approved by the State Office of Emergency Services on October 19, 2004. Parts Four and Five were forwarded to the State and FEMA for review on March 4, 2005. The Mitigation Plan will be implemented through the mitigation actions and existing planning mechanisms contained herein.

The State Office of Emergency Services approved the County's Multi-Jurisdictional Hazard Mitigation Plan on April 29, 2005 and forwarded it to the Federal Emergency Management Agency for review. The County's plan was approved by FEMA on July 22, 2005, pending formal adoption by the Board of Supervisors. Each participating jurisdiction in turn will have their governing body formally adopt the County of Stanislaus Multi-Jurisdictional Hazard Mitigation Plan, along with their individual plan, as their own Local Hazard Mitigation Plan. The County's plan serves as the umbrella plan with each individual plan considered an annex. The Project Manager will collect all the signed resolutions from the participating jurisdictions and forward them to FEMA for final approval.

PARTICIPATING JURISDICTIONS

For a list of the participating jurisdictions, please refer to the chart beginning on Page 83 of the County's plan.

As of August 23, 2005:

- 49 jurisdictions participated along with the County in our Multi-Jurisdictional Hazard Mitigation Plan.
- 31 LHMP plans were approved by the State Office of Emergency Services and the Federal Emergency Management Agency pending formal adoption by our governing bodies.
- 18 participating jurisdiction's plans need additional work. Those jurisdictions will be working on addressing the required and recommended revisions made by FEMA in their respective crosswalks.
- 58 other jurisdictions were invited to participate but declined due to the enormity of the project. One of the 58 jurisdictions hired a private consultant and turned in a separate plan not associated or included in the County's Multi-Jurisdictional Hazard Mitigation Plan.

Stanislaus County Multi-Jurisdictional Hazard Mitigation Plan

Appendices

Index of Appendix Tables

The tables of risks are arranged in the Appendix by hazard, as listed below. Within each section (for each hazard), tables are provided to identify the population, housing or property at risk in the following order:

1. Population and Housing
2. Parcel Values (for privately-owned properties)
3. County Properties (buildings and building sites)
 - a. Existing County-Occupied Properties
 - b. Future County Properties
4. Infrastructure: Bridges
5. Drainage Districts
6. Lighting
7. Traffic Signals

The total population, valuation and inventories of housing, County properties and infrastructure are listed in the baseline data provided in Appendix K.

The appendices are provided in the following order:

Earthquake Hazard	Appendix A
Flood Hazard	Appendix B
Inundation: Don Pedro Reservoir	Appendix C
Inundation: Exchequer Reservoir	Appendix D
Inundation: New Melones Reservoir	Appendix E
Inundation: Pine Flat Reservoir	Appendix F
Inundation: San Luis Reservoir	Appendix G
Inundation: Tulloch Reservoir	Appendix H
Landslide Hazard	Appendix I
Wildfire Hazard	Appendix J
Baseline Data	Appendix K
